Elitist

Dear CU,

I am writing about the tips given for *Elite* in your generous free booklet in the February 1986 issue. It is incorrectly stated that Trumbles are found in "Whichever" space, as they are offered to you by the Merchant Prince of Thron if you've a spare 5000 credits! Only one is offered, which soon multiplies. They can only be got rid of by flying close to the sun. Using an Escape Pod always seems to leave one behind!

I would like to know why everyone is suddenly calling it 'Whichever' — the area in between Hyperspace occupied by Thargons. In the *Elite* manual it calls it 'Witch' space.

I have *Elite II* by the way, which is on a green floppy disk! The only difference to the original *Elite* is that Firebird have sneakily put a new piece of music on the title screen, and any attempts to alter a saved file to gain *Elite* status that work with *Elite*, don't work with *Elite II*.

I have played the games most evenings for a couple of weeks and already own plenty of equipment — I find the docking computer invaluable as it never fails (unless you hit a ship coming out of the station — this once happened a second before I was about to dock Game over!). I have found it best only to switch the computers on to dock when you clearly see the shape of the space-station in your sights, otherwise you are merely travelling at less-than-full speed towards it I must sign off now, though. I think there's a Python on my tail Commander Flash, Above Average, Galaxy 3

• Thanks for the info, we'll be having a word with our own Elitist Fred Field.

Sweet charity

Dear CU,

I am writing to complain about the software industry's decision to give money from the 'Off the Hook' charity tape to drug addicts. Surely there are more deserving causes than a bunch of idiots who choose to kill themselves by taking harmful substances? What about old people or the sick?

I am all in favour of charity work, but why drugs? Give it to those who deserve it.

Bruce Allen,
Basildon, Essex

• Drug addicts are victims in their own way, you can't knock people for trying to help the disadvantaged. At least this industry acknowledges responsibility to the public. Having said that, it was a surprising choice of charity in some ways. Anybody out there got an opinion on this one?

Pet corner

Dear CU,

I am writing to you because I need help. Yes, I've tried radio phone ins and agony aunts but no one seems interested in my predicament.

My problem is Adam, my adopted pet computer person. He won't pay any attention to me. Whenever I ask him to do something he ignores me. Not once has he offered to play a game with me.

Can it be that he just doesn't like me or am I doing something wrong? Worried Owner,
Blackpool.

• Dear Worried. You

seem to have been most unfortunate in your choice of pet person, he seems a grumpy little swine. You have two options: punish him by starvation, lack of petting and general rudeness; or be more polite — grovel to him.

For anyone else with pet person worries our consultant is always willing to give advice.

Sun City reader

Dear CU,

I am an avid fan of your publication but Mike Pat, tonden's 'Soweto Rael' comment in last September's Hotshots was a below the belt blow for your many South African readers. How politics could ever get into a computer magazine totally bewilders me!

However, even more frustrating is the comment, "put down the revolting natives". For someone who is apparently making a political statement, this is a racist comment!

Does *Commodore User* regard black people as 'natives' — primitive people who roam the jungle?

Making a reference to blacks as 'natives' would invite a blow on the head here in South Africa. If *Commodore User* holds something against South Africans, why sell your magazine here?

I know you won't print my letter, but unless you print an apology, I will not buy your magazine again.

We do not need political statements in our favourite computer magazine! Let Mike Pat tonden picket our embassy, but please just review the games

Michael de Braglio,
Johannesburg,
South Africa

• Oh, dear, ever heard of irony? Your fear of politics totally bewilders me — how did they ever get into South Africa I wonder? Sorry to depress you but even in our industry nasty old politics gets a foot in the door: charity, tapes, Falklands games, Commodore making hundreds redundant, fundamentalist Republicans pretending that bombing Moscow is a game. M.P.

Infocom info.

Dear CU,

I would like to inform your readers of a new adventurers club just for Infocom owners. There will be a newsletter with hints, tips and a helpline. If anyone is interested, please send me an S.A.E. to the address below. Thanks.

Chris Cobb,
36, Hatton Ave.,
Wellingborough,
Northants,
NN8 3AP.

Pen friends?

Dear CU,

I am a 21-year-old Dutch boy, and a Commodore 64 user. I would like to correspond with an English Commodore 64 owner, to exchange information about all the possibilities of the Commodore 64, and so on. Could you please help me find somebody to correspond with by placing this letter in your "Feedback" column?

René Groenewoud,
Onyx 15,
1703 CD,

GAME KILLER

A gamer's life was never easier. We've had maps, Pokes for infinite lives, and even 24-page Commodore User supplements on the subject of game beating. But now we have the games aid to top them all — Robtek's *Game Killer*.

This plug-in cartridge enables you to break into certain programs that have been driving you up the wall and simply sail through to the final screen.

A prototype *Game Killer* was demonstrated in the CU offices last week and we all had to stand back in amazement as Mastertronic's *Kick Start* was sliced through — like a knife through butter.

The device works by freezing certain sprites — whilst letting other functions as normal. For example, in *Impossible Mission* your agent can dash through the rooms, take the lift, and search the rooms whilst the droids just stand and watch.

The bad news about *Game Killer*, though, is that it will not work with all games. It can only work with those that monitor "sprite collisions" — which is what happens when two moving objects bump into each other.

As a rough guide *Beach Head*, *Impossible Mission*, and *Monty on the Run* can be "killed", but *Rambo* and *Commodore* can't. The *Game Killer* is available from Robtek at £14.95. More info on 01-209 0118.

Biggles flies a game

Mirrorsoft have announced that they are working on a game based on the old Captain W. E. Johns hero Biggles. The game ties in with a new spoof film currently under production and due for release in the Spring.

Biggles, the film, features a seventy year time span bet-

ween the First World War and the modern world via a time machine which enables Biggles to meet his time twin.

The game is broadly based on the film and features four separate stages combining "unique elements" with "classic styles of game play". Though primarily strategy-

based, the last part is a flight simulator scenario.

"We're only at storyboard stage", says Mirrorsoft's Pat Bitton, "but there are a lot of novel ideas already." Spectacular sound effects are also planned for inclusion.

Biggles is due for release in late May at £9.95 (cass).

Shorts

Plus/4 saved: Three (and a half) cheers to Software Designs who've rectified Commodore's megagaff on the Plus/4. Frustrated users of the aforementioned know that you can only load and save files from the built-in software to disk. Now you can use tape, with a new program called *Three-Plus One* which costs just £4.95. It won't work with the database, though, because that uses "random access" files — spreadsheet and wp files work just fine. One more plus is that files can be easily transferred if you do decide to upgrade to disk. *Three-Plus One* appears in the latest Softpost catalogue from Commodore (tel: 0536 205555).

PLUS/4 BLUES

Since Christmas the CU offices have been flooded with letters and telephone calls from new Plus/4 owners complaining about the lack of software for their new machine.

Many hapless buyers also complained that they bought the Plus/4 under the impression that it would run 64 software.

The truth is there is very little software available for the Plus 4 — and almost all of it is obtainable only through Commodore's Softpost mail-

order service.

Commodore executive, Gail Wellington, denied that the company were being unfair in selling a computer that had little if any software support. "There is more software coming through and we have no intention of not supporting it," she told CU.

On the games front, Plus/4 owners will have to content themselves with C16 games — all of which are compatible — and are listed in full in our C16/Plus 4 round up in this issue.

Shorts

Books corner: Prize for the wackiest book yet published for the Commodore 64 goes to Collins with their latest title, called *Football Pools with the Commodore 64* (£7.95). Last month we gave you the wrong number for a company called *Venturegate*. The number should read: 0532 661834

Good times, bad times

In every cloud there lies a silver lining except, it seems, in those that hang over Commodore's ill-fated Corby assembly plant. Only eighteen months after opening it with an embarrassing display of 'we're backing Britain' enthusiasm, Commodore announced its closure in early January, with the subsequent loss of 250 jobs.

The 64 and 128 machines assembled at Corby will probably now be made in Commodore's German plant in Brunswick. And Commodore's Chris Kaday is confident that this should not affect the level of supply and service in the UK. 'We don't expect any diverse effects in these areas'. Taking into consideration Commodore's already 'adverse' service record, those words sound rather hollow.

Amiga goes public

The Amiga did help to lift the general air of gloom when it attracted large crowds at the January Which Computer Show in its first UK public outing to be far, though, there was little else for the jaded businessman to enthuse over, a sign that the computer business generally is losing its nerve — and probably a lot of money.

Showgoers may have drooled over the Amiga's sound and graphics but found no evidence that big-name business software will be available for it, there was absolutely no sign of a good wordprocessor, a reputable database or spreadsheet. And if businesses can't be persuaded to buy it, at over £1,000, who else will?

What we saw displayed was less than encouraging. Taurus Impex showed a fledgling database called Acquisition, both Y2 Computers and Talbot Computers had comms and worddata software. Nine Tiles had a network system. More interesting Cygnit Computing showed Amiga Front Desk, a typesetting, art and production package, whilst the American Tecmar company displayed its

somewhat overpriced Amiga compatible 20MB hard disk drive. Music Sales, who produce Music Maker for the 64/128, demonstrated some synthesiser software.

At least Commodore made an impact at Which Computer, which it didn't do a week earlier at CES, America's largest microcomputing event. Why not? Simply because it wasn't there, and the reason for that is probably more to do

with a lack of software than a lack of funds to pay for the licence.

The absence will have added fuel to the war Atari and Commodore are currently waging in America. Atari claims to have more than 100 software titles already available for the 520ST — and it's not all games.

What's more, you can actually go into a shop and buy the ST. And to rub salt into the wounds, you'll come out with a lot of change from £1,000. The Amiga is due to be shipped to the UK at the end of March; let's hope the price-tag doesn't have one too many noughts on it.

Shorts

First books for 128:

Following the success of its 'Anatomy' series of books for the Commodore 64, First Publishing has acquired three more titles, this time for the new 128. Called *Anatomy of the C-128*, *Anatomy of the 1571* and *C-128 Tricks and Tips*, they'll cost around £13 each. All three books were originally written by Doto Becker in Germany, from whom First has also acquired a disk based Compiler for the 128. That's just finishing translation and will retail at £24.95. Contact First on 07357 5244 for more information.

Shorts

MPS Descenders:

MPS 801 printer users will know what descenders are and know that they can't get them. So MPS Software has come to the rescue with a replacement chip (£14.95) that redefines the character set to produce the tails on letters like 'p' and 'g'. Of course there's a trade-off: to get the extra dot at the bottom they had to take one off the top. So characters, especially capitals, look a little squashed — but there's a definite overall improvement. Contact MPS on 01-800 3592 for more info.

Shorts

... And for the 16:

Things are looking rarer for the much-maligned C-16. Duckworth's have announced no less than two new books for it: *Using the Commodore 16* (£9.95) and *The Complete Commodore 16 ROM Disassembly* (95p.), both by author and adventure writer Peter Gerrod. The former is more-or-less a Basic and simple machine-code tutorial for beginners complete with a few type-in programs, whilst the latter should satisfy the technical needs of the more sophisticated programmer. Duckworth's is on 01-485 3484.

At long last, the big-brother version of the 128 is available. Launched at the Which Computer Show in early January, the new 128D is a C-124 with built-in 1571 disk drive, monochrome monitor and the CP/M operating system. The whole lot will cost you £499 excluding VAT.

Although the 128D was a little overshadowed by the Amiga at the Show, it did display sufficient 128-dedicated business software to make it a particularly attractive machine for the small business. And that's exactly where Commodore expects it to sell.

Obviously that software was already available on the original 128, what Commodore's done is to design a machine that looks more businesslike — like a true personal computer, in fact.

between using micros for business or leisure — a mould the Atari ST and Commodore Amiga are already trying to break.

But will the 128D sell as well as Commodore hopes? Its major rival must be the Amstrad 128 and PCW 8256 machines, the latter offering computer, disk drive, monitor, printer and bundled software for £100 less.

The 128D is very sleek and good looking, the perfect machine for users who need a machine that 'looks' and performs to professional standards but who wouldn't turn their noses up at a few slick moves with Rock 'n' Wrestle.

Inevitably, the price will decide whether the 128D takes off or flops like the SX-64. You simply can't help asking, if Amstrad can do it, why can't Commodore?

Bohdan Buciak

128D Launched

Shaping up for business

So the 128D sports the conventional three-unit design: a detachable keyboard, a system box and a monitor perched on top.

Taking the system box first, that houses the 128's innards with the 1571 disk drive on the right. Power on/off and disk drive indicators appear on the front panel.

And all the 128 ports and sockets are duplicated faithfully. Two joystick ports and a reset switch are found in their usual position down the right side, together with the keyboard cable socket. Round the back there's a cartridge and user ports, video and serial ports, TV and RGB sockets. Thankfully Commodore didn't forget the cassette port, a crime they were guilty of on the SX-64 portable.

Once again, the keyboard layout remains faithful to the original despite being detachable and much slimmer. There's an element of portability in the 128D in that the keyboard clips on to the bottom of the system box which has a handle built into the left side. So you can carry it around easily enough, but

there's still the screen to contend with.

Commodore has opted for the 1900M monochrome monitor to bundle up with the machine, probably because the 1901 colour monitor would have taken the price above the crucial \$500 barrier. You can get the 1901 instead, but you'll probably pay around £150 more for it. For users not bothered about colour, the 1900M will give both 40 and 80-column displays.

Go-faster drive

Probably the most exciting thing about the 128D is its built-in 1571 disk drive, a sleek double-sided drive that fits neatly into the low-profile system box. It has the capacity to run CP/M software around ten times faster than the sluggish 1541. Data storage capacity is also much increased: 410K formatted when in CP/M mode. That makes it a much more attractive proposition for users put off by the 1541's lousy performance.

Existing 128 owners, though, will be a little miffed by the 128D, since the 1571 drive is still not generally available as a separate peripheral. So far,

they've had to make do with the ugly looking single-sided 1570 model.

Business bargain?

Despite using pretty old technology, the 128D is one of a new generation of micros that exploit the wealth of business software running under the CP/M operating system. Similar machines include the Amstrad 128 and PCW 8256.

Of course the 128D's other attraction is its 64 compatibility, making it perhaps the first 'business' machine to offer a huge range of games. And that's good news because it breaks down the artificial barrier

● *High Street hi-fi gurus Laskys, has just announced that it is to sell the Commodore PC10 and 20 machines in its 30 largest shops.*

Commodore has reduced its price specially for the occasion. So the PC10 (dual 5.25 disk drives) comes in at \$1,199, whilst the PC20 (20MB hard disk) is being priced at \$1,799.

Colour versions of both models will cost around \$400 extra. Laskys will also sell you software, add-ons and free installation through micro maintenance experts. Mills Associates

Integral disk drive and detachable keyboard for the 'professional' user.

YIE AR KUNG FU
Commodore 64/128
Ocean
Price: £8.95/cass

Ocean's penultimate Konami release should have made it out for Christmas, but the out-of-house programmers in Scotland couldn't get their act together. The opposition can count themselves lucky — it would have cost them a lot of sales

Screen Star

You take your first five opponents

Chain:
 You'll have to be nimble to stay out of reach.

Devs 'Rambo' Collier stepped into the fray and knocked the game off, in a couple of months. It looks, though, as if it's had a year's care and attention lavished on it.

If you've never emptied your change into the original (where have you been?) it's a classic arcade struggle to fight your way through ten different and progressively deadly opponents in an attempt to become a Kung Fu Master.

The action takes place against two backdrops, a waterfall (cascading more impressively down a mountain than the piddly little one in *Winter Sports*) and a courtyard set before a mansion.

Controls are much like you'd expect them to be if you've played *Fist*. Sixteen moves in

Fan:
 Pretty but deadly.

front of the material. This is Nunchu with the nasty rice flail.

trape you he'll pin you down. A chance from the coin-op version. **CHAIN:** The reach on this guy is a major problem. Timing your attacks is essential if you want to stay alive. **FAN:** Deceptively deadly, Fan is pretty and cute as a tarantula on a birthday cake. Fings fans that do a lot of damage. **SWORD:** This man's danger doesn't need much pointing out. Stay out of reach if you don't want to end up as rouval cuisine. **TONFUN:** Fights with flailing sticks, is skilled and very fast. **BLUES:** The big man himself. A Kung Fu Master in his own right. Your toughest opponent. **Mike Pettenden**

KUNG FU MASTER
Commodore 64
US Gold/Data East
Price: £14.95/disk
£9.95/cass

The era of the combat game continues. This one, based on the coin op of same name, makes no attempt to challenge in terms of graphics or animation. Instead the emphasis is on action gameplay. Pretty successful if it is too. The idea is to progress through five floors of a temple in a bid to rescue a beautiful captive maiden, yawn. Naturally the schemes become increasingly

continued on p. 13

Several punches and kicks must find their target to defeat the giant on the third level.

Don't let the wass hit the ground or you get one of these dragons.

two modes. Eight joystick positions to punch and manoeuvre and eight more with the fire button depressed for a crumpling selection of blows. Each strike earns you points, the highest score being awarded for the flying kick.

The similarities to *Fist* and right there. If Melbourne House's game is the software equivalent of David Carradine's TV Kung Fu, then this is 'The Water Margin'. As Oolong, the hopeful young pretender, you'll be bouncing around the screen with phenomenal leaps and bounds tackling an array of eccentric opponents.

What really sets this apart from the mighty *Fist* and the other martial arts games is the speed of the thing. *Ye Ar Kung Fu* will give you a sore trigger finger and aching wrists. It's much faster than the Konami original. I know because the Ocean boys made me play their arcade machine. I can work my way to the end of the original but not on their conversion - not so far anyway.

I promise you as well that you

won't want to rest until you've beaten the lot. It's not easy, even the programmers struggle at the final opponent. Add to this nine different sets of music from Martin Galway and you're looking at an impressive all round package.

There's no need to feel you've got to disregard this because you've got *Fist*. It stands up on its own. Slightly smaller figures (they're only three sprites high to *Fist*'s four) are made up for by equally compulsive gameplay and brutal toughness.

Here we have a conversion that's even better than the arcade original. Now, where's the elastoplast?

YOUR OPPONENTS. **BUCHU:** Fat and stupid. More of a gentle introduction to set you up for what's coming next.

STAR: A hard woman this one. Not only is she a bit useful with the moves, but she throws those wicked looking kung fu stars. **NUNCHU:** Flails viciously with the nunchaku rice flail. Hit and run.

POLE: Wields the ancient rod of Bo (wasn't she in 'Ten'?). If he

LOUISIANA SUPERBOWL NEW ORLEANS

How do you take on a dwarf?

continued from p.11

vicious and numerous on each floor. You have to destroy them all using an array of kicks and punches.

What makes the game different is not the range of attacking moves at your disposal — this is pretty limited — but rather the number and variety of the enemies arranged against you. Many of them are destroyed with just one or two kicks or punches and smashing your way through half a dozen in quick succession is somehow much more satisfying than the usual prolonged combat against an individual.

The range of enemies is formidable: — Henchmen are the easiest. They approach you like zombies, and if you fail to knock them out with a single blow they will cling to you, sapping your energy.

— Knife-Throwers take two blows to be killed, and in the meantime you'd better duck or leap over the knives they throw.

— Falling Vases can be shattered with a single kick, but if you miss, they hit the ground and an indestructible snake crawls out.

— Dragons will emerge from falling bells unless you can hit the bell in the air.

— Dwarves can only be hit by a squat kick or punch. They have a nasty habit of somersaulting onto you.

— Killer Bees attack you at varying heights and must be despatched with an appropriate kick or punch.

— Guardians. There's just one of these on each floor guarding the stairs to the next.

With all this going on it's not surprising that the graphics aren't sensational. The characters are all fairly small, and your hero hobbles along with a serious leg injury right from the start. The sound too is fairly rudimentary with not much more than a short rhythmic tune and the odd thwack sounding just a little like the sound tracks of most Kung Fu films.

Never mind. I enjoyed Kung Fu Master a good deal, and that's despite being a gentle and peace loving person.

KONAMI'S BARMY ARMY

I'm heading towards a pub called 'The Place'. Next Door' to shoot some pool with a large contingent of Ocean's programmers. When Martin Galway takes a small diversion into an arcade. "You've got to see this, it's great!" he enthuses.

You have to storm across the screens and free them before they get shot. En route you encounter hordes of enemy troops to begin with you're only armed with a knife, but later along the way you'll pick up a flamethrower, bazooka, and grenades.

Programmer Dave Collier with music wiz Martin Galway and Steve Whalsh (left to right).

The game in question is *Gunfire!* on Atari coin-op that allows potentially four players at once to get involved. "I've got an Amiga at home at the moment and I'm going to work out a way of doing this," he says enthusiastically.

"What", I wonder aloud "is coming next, though?" My question is answered back of Ocean after I've sampled the arcade versions of *Mike and Ye Ar Kung Fu* in Martin's little sound studio.

Dave Collier enters with a brown paper package, unwraps a circuit board and shoves it into the arcade machine that stands in the corner, its innards spewing everywhere.

A tap of the one player key and all is revealed. It's Konami's *Green Beret*. "We've signed up another deal," smiles Dave Collier. "I can't wait to get started."

In case you've never heard of *Green Beret*, it's a kind of rightwards scrolling *Commando*. To describe it like that though, is an insult to the game. It's much better than Capcom's effort.

The object is to rescue four prisoners who await a firing squad, tied to posts in a com-

Among the enemy troops number paratroops, kung fu soldiers and dog handlers. The final test is a unit of men armed with wicked flamethrowers. Graphics and sound are brilliant. In fact I'm sure it's going to be enormous.

Dave Collier turns round to director Paul Finnegan. "How long have I got on this one then?" he asks suspiciously. "Oh loads of time, Dave, at least six weeks."

If the job Dave Collier has done on *Ye Ar Kung Fu* is anything to go by he'll do it, and he'll do it well!

The Ocean all purpose arcade machine. Guts spewing out everywhere.

Dave Collier gets to grips with the arcade version of *Green Beret*. Bit more practice needed there Dave.

Commodore 64 Chart

Chart Chat

This month we bring you the only professionally compiled C16 chart around. All because the constant flood of letters we receive from you demanding one gave us no choice. And look who dominates the top six positions, Mastertronic!

Watch out for big changes soon. Expect Elite's *Commando* to shoot to the top and stay there for a long time.

Vindicated! Over on the 64 chart *Rambo* has knocked *Commando* off the top. And you doubted our word! Nice to see *Kane* our budget game of the month doing well already.

Watch out, though, for *Yie Ar Kung Fu*, set to explode on to the scene right now. Our other screen stars will do equally well and Ocean may well have a fight on their hands with Hewson's classic shoot 'em up, *Undum*.

THE EIDOLON
Commodore 64/128
Activision
Price: £9.99

Late one night on your way home you happen to pass by the eerie mansion of Dr. Joseph Agon, who happens to live in your neighbourhood. Being the careless type, he has left the front door wide open and you being the nosy type decide to take a butchers round his gaff.

In the living room, just behind the settee, you discover The Eidolon - a sort of space/time machine invented by Agon over a hundred years ago. Fortunately it was built to last and after tweaking a few knobs and levers you find yourself in a strange and mysterious world of cavernous mazes.

This is where the story ends and the game begins. Making your way around the labyrinth you must collect three jewels: one red, one green, and one blue. Of course it's not just a case of pick them up and thank you very much.

First you have to find them and there are a few problems there, namely trolls, rattlesnakes, puffin birds, etc. These little beasts complicate things by bumping in to The Eidolon and draining it's energy reserves. If all the juice runs out you end up back in Dr Agon's living room - i.e. game over.

The creatures can be thwarted by using spheres of energy at them. These come in four colours (a very colourful game) thus red, blue, green and gold. red

Oh dear, he doesn't look too pleased, better hop it.

can be found hovering around the maze.

Different coloured spheres have different powers. Blue ones give you more time by freezing. The Eidolon's clock and gold spheres recharge your energy reserves. The green spheres have the power to transform one creature into another and red ones are essential for destroying the guardian of the jewel.

Once you have a jewel in your possession you must travel to the end of the cavern where you will find a statue of a dragon.

If you picked the right coloured gem the dragon springs to life

and you must destroy it with a multi-coloured energy sphere cocked.

If Dr Agon's diary is to be believed there are seven levels, beyond which lives a dragon of truly horrendous proportions.

What sets The Eidolon apart from the numerous other maze games around is the structure of the maze and the quality of the graphics.

The maze actually looks like an underground cavern rather than the familiar breezeblock structure. It's also possible to turn by degrees and move in any direction which certainly adds to the

sense of realism

BOUNDER
Commodore 64/128

Gremlin Graphics
Price: £9.95/cass

Bouncer - "Infernally addictive".

Funny, this game comes to me with the firm recommendation of another magazine stamped on it. If I was less charitable I'd say well it's a good job I am feeling charitable today.

And what a horrible game it is! No don't rush off, I mean that it's left me foaming at the mouth, chewing bits off the carpet and clutching clumps of hair. You can take it as read then, that this is infernally addictive.

The idea is simple and as far as I know original. You guide a tennis ball hopscotch style over a series of platforms set high up above the ground. Missing a platform results in your ball disappearing over the edge and plummeting earthwards until you hit the ground cartoon style with a little puff of dust.

Bouncing around the slabs isn't as simple as it sounds. An

endless supply of meemies drift about and lurk in wait. Contact with most causes you to pop and lose a life. It really is as simple and beautiful as that.

It's all a case of trial and error of course. Each time you have to get a little further just to see if you can improve, just to see what's coming up as the screen scrolls lazily along.

Graphics are neat and colourful, and the scrolling is smooth and staggered giving you a sense of the depth of the canyon below you. And the tune just aggravates the whole feeling of irritation when you fail. And fail you will - many times!

When you consider there is a useful little game on the other side of the tape (Metabolis) then this all adds up to a package well worth having. Besides which, who the hell needs an Amiga to

HARDBALL

Commodore 64
US Gold/Accolade
Price: £14.95/disk
£9.95/cass

Oh boy, American sports fans are going to love this. Admittedly there are already three baseball simulations on the market, but this one makes the rest look prehistoric.

Somehow it manages to combine both the management and action aspects of the game without compromising either. Especially memorable is the animation of the pitcher and batter and the way that pitched deliveries are depicted.

The view for this key part of the game is from behind the pitcher. You see his back, while facing you is the batter and behind him the catcher and umpire. If your team is in the field you have to decide what kind of pitch to deliver and in which precise direction. There's a total of over 40 combinations, ranging from Fastballs to Sinkers, Sliders and Change-Ups.

What's remarkable is that each different pitch is depicted slightly differently on screen. For example, if you select a high Curveball which you want to swing away from a left handed batter, that's exactly what you'll see happen. From the point of view of the pitcher the skill is to maintain a good variety and keep the batter guessing.

When you're batting the problem is to spot what type of

Above Lean back and take a swing

Right A flash of light bottom right as our star makes a home run.

delivery it is as early as possible so that you can respond accordingly. You have the option of swinging high, low, inside or outside by moving the joystick at the appropriate moment. But if you can see the ball is wide it's best not to swing at all - if you do and you miss a 'strike' is recorded against you. Three and you're out.

As in the real game, split-second reactions are the key

There is also a strong element of bluff, especially when you're taking on a human opponent instead of the computer.

If the batter connects, the view switches to the part of the field where the ball is moving. If you're holding you can move the nearest fielder to the ball and then throw it to one of the 'bases'. The view immediately changes to a close-up view of whether the ball or batter arrives first. This constant flicking between screens gives the impression of televised coverage and is very effective.

What isn't so effective is the way the ball moves when thrown by an outfielder. It starts in credibly slowly but then suddenly speeds up in a manner which would make Isaac Newton turn in his grave. A pity that, but it's

about the only thing about this game that's shoddy.

If the action part of the game isn't enough for you, you can start getting involved in the management side - selecting a team, substituting players, fielding individual players in the most appropriate positions etc. Various statistics are supplied to help you make sensible choices.

Incidentally, if baseball is new to you, the program instructions do include a summary of the rules of the game - it's well worth getting into, and this program, without question, is the best way of doing so.

DRAGON SKULLE
Commodore 64/128
Ultimate/US Gold
Price: £9.95

Sir Arthur (yawn) Pendragon is at it again. After battling the nesties in *Staff of Karnoth*, journeying to Egypt in *Entombed*, and sailing the high seas in *Blackwyche* until undaunted — he arrives on a hostile island, home of the evil Skull of Souls.

Ultimate have been dragging out this tale a bit too long. I can't be the only person who has become less than enthralled by the latest instalments in the continuing saga of Arthur Pendragon.

Rather like a once good soap opera that has gone off the boil, Pendragon games arrive with dreary regularity. Please Ultimate, let it end now.

Part four of the saga does actually offer a new game play mechanism — icons. These picture symbols are used by Sir Arthur to select certain tools like the magic cloak and shovel.

In order to select these tools you have to move a finger pointer on screen by pressing the space bar. This means you have to get quite near the 64 when playing the game — not too comfortable for this type of drawn out arcade adventure.

I'll give you a tip to get you into the game as the first puzzle is frustratingly unintelligent. What you have to do to get beyond the skull guarding the entrance to the underground complex is walk to the left until you can touch the star path on the ground. This lifts the skull to let you enter.

It's now icon time, as you select your Magical Orb. This is actually your nasty zapper, and there are plenty of them too, as you would expect from Ultimate. These take the shape of Jumping Eyeballs, Weeps, Devils, Werre Ants, Skull Bats, Salamander, Archers and Dragons. Etc.

Your first major hurdle is a fire spitting Dragon who is belching

and then back onto the screen to ensure that he will always be in the same place.

The shovel comes in handy as you start the game. You can use it to dig up the graves scattered around the play area to win extra lives. Caution needs to be employed here though as you might just dig up a ghost.

There are plenty of these hair wrenching puzzles in *Dragon Skulle* and certainly the game is the toughest of the Pendragon series. Apart from its toughness it loses out by comparison with

some of its predecessors. The graphics are not as pretty as *Entombed* and *Blackwyche* and you would have thought by now, that Ultimate would have done something about the appalling animation of Sir Arthur. If anything it's worse than ever in this episode.

I can't recommend the game. The challenge is a tough one but very uninteresting. A disappointing conclusion to what was a very good series of games. Best Pendragon game is still *Blackwyche*.

Eugene Lacey

flames at you from across a bridge. Several direct hits are required before this beast disintegrates so that you can pass.

A nice early shoot 'em up this which boded well for the rest of the game.

The enjoyment was not sustained for long though when soon after — I arrived at an apparently insurmountable obstacle. Another bridge with four scrolling screens to the left, and to the right — both ending in dead ends. You have to get across that bridge. To do this you have to shift the skull blocking your path and — just one more tip, you can blast away at the nesties until the cows come home and the skull will still be there.

What you have to do is shoot the fierce native who is lobbing spears at you from the other side of the bridge — not once but eight times. To do this you can use the usual trick of dodging off

ZOIDS

Commodore 64/128
Martech
Price: £9.95/cass

If you have ever messed around with a Zoid you will know that most of the fun takes place in your imagination.

You set your Zoid up and imagine it ripping into another Zoid — perhaps holding it aloft and making screeching noises as you do so. Vivid pictures are conjured up of the Zoids tearing at each other — like the fight scenes in those dinosaur films.

Twenty-seven year olds like me used to do similar things with our Action Man dolls way back in Pre Zoidic times.

I know, I know, you are too old for either Zoids or Action Man but all I am trying to say is that it needs to be a damn good game, or damn good anything for that matter, to compete with the images created by your imagination. Which is probably why films of the book usually disappoint.

But let me say right away that Martech have achieved that difficult task with flying colours in Zoids — the computer game.

ZOID WARS

The action takes place on the planet Zoidstar where, after the collapse of a mighty Zoid empire, the Zoids turn on each other as supplies of Zoider fuel began to disappear.

Without repeating too much Zoid history there are basically two types: Red ones — led by Redhorn the Terrible — and the Blue Ones led by, you guessed it, your good self.

Once Redhorn has defeated all the blue Zoids and captured their cities he intends to re-conquer

the galaxy. You are the Blue Zoids, lest hope.

The screen presents you with a Zoid's eye view of the planet. A scrolling map shows you a tiny fraction of the planet at any one time as you slowly explore it, setting out Red Zoids, their cities, power installations, and communications centres.

Before you can goad Redhorn into battle you must first rebuild the Mighty Zoidella — who you will then take into battle.

Eight pieces of this mighty Zoid are hidden in certain Zoidstar cities. Your information scanners tell you the likelihood of a piece of the Zoid being present in percentage terms.

Using the information scanners is an essential part of the game because if you wander around attacking cities willy nilly then you will be set upon by hordes of Spinebacks and Trooper zoids.

Zoidstar is a pretty huge planet and you would be wise to make a map.

All of the cities are in contact with one another and they are monitoring your movements and passing this information around.

If you do decide to attack a city it is therefore wise to take out its communications to wet first.

But this alone is no guarantee of keeping your conquest secret as Hellbrinner's are dispatched as soon as a city is attacked, and there is also constant movement of Slicker's around the planet. As well as transporting materials, Slickers have information between cities.

The game boasts by far the best use of icons (picture symbols) and windows ever seen on a 64 game. An expensive piece of business software running on Amiga or a Macintosh is the nearest comparison for these graphics — only the business software would not be nearly as much fun.

It will take you quite a while to master all the icons and their uses. There is the jamming system, for example, that can be used to jam Redhorn's some or thermal missiles. To do this you first of all have to position you on screen pointer over the jamming icon, press fire to make the jamming window unfold, and then match your wifes to the missiles waves as closely as possible.

It is learning the sequence of selection that is the difficult bit. Well part of the difficult bit — because jamming and the successful use of missiles is pretty tricky too.

But don't worry about these two devices for the time being — you only really need them for destroying cities and taking on really powerful Zoids.

RAIL GUN

Beginners can get a great deal of fun out of exploring the planet and attacking weaker Zoids with your Rail Gun. This is a good old shoot 'em up screen where you waste to get a Zoid in your

jamming Redhorn's missiles

sights score a good few direct hits, and watch it go up like a pile of fireworks.

The good thing about the icons is that they are not just useless frippery but they serve a purpose — of getting you quickly into the required piece of animated action.

All the time you are playing the game you are presented with messages. For example as you approach a city a window opens to inform you that "Six Spinebacks approaching to defend city". That is your signal to reach for your missiles.

There are several different types of Zoids — and you will need to learn their relative strengths as quickly as you can so that you can decide when to turn to run and when to fight.

Get the impression I like this game? You bet I do. It has everything — great action scenes, strategy, music by Rob Hubbard (he of the *Leafl V8*, *Commando*, *Morfy* on the *Run* and *Master of Magic*) and graphics which will just look at the screen shots.

The phone lines have been buzzing around Farringdon ever the last few weeks as The Commodore User team have been phoning in to listen to Mike - Hot Shots - Pallenden introducing our exciting Dial 'N Listen Prize Line.

There are super prizes to be won in the first ever computer games phone-in competition.

The quality of the sound tracks on C64 games has rocketed in recent months with experts like Ocean's Martin Galway (Hypersports, Transformers), Rob Hubbard (Zoids, Master of Magic, Last YB) churning out unbelievable sounds at great speed. To celebrate this new development in gaming we have recorded five of what we think are the best soundtracks around at the moment.

If you can name the games on the Prize Line III in the form below as quickly as possible and send it off to Commodore User, Prize Line, Priory Court, 30-32 Farringdon Lane, London EC1R 3AU. Entries must include the coupon below and reach our office no later than March 20 1986. You could be on to a super prize.

GAMES-LINE Competition

The Numbers

The Prize Line number is obtainable 24 hours a day seven days a week.
If in London call 0077 1156 to Matiniles service.
Outside London call 01-251 5631 or 01-251 5633.

The prizes

First Prize

Our lucky winner will receive a British Telecom/Merita Hawk portable telephone. The Hawk is slim, lightweight, and will work anywhere around the house and outdoors as well as up to a range of several hundred yards. The lucky winner will also receive this month's two Screen Stars - *Orion* and *Zoids*, plus *Rock 'N' Wrestle* and a Commodore User T-shirt.

Second Prize

Ten second prizes of a free one-year subscription to your favourite magazine - Commodore User.

Third Prize

Thirty third prizes of the excellent new game from Melbourne House - *Rock 'N' Wrestle*. This wrestling simulation comes from the same team that programmed *Exploding Flat* and offers a multitude of moves. It's bone crushingly good.

BACK TO THE FUTURE
Commodore 64/128
Electric Dreams
Price: £7.95/disk

Back to the Future is like playing one of those games with the tiny ball bearings in a little glass container — just when you think you are about to get your last ball bearing in place one of the other ones rolls off its position and you have to start again.

Back to the Future is very similar as you have to try and keep all the characters in the same place for long enough to get them to do what you want them to do — in this case, fall in love.

For that one reader who hasn't seen the film yet (this is for you, Marty), cute American teenager who travels back in time to the year 1955 in the 'Doc's' time machine.

When you get there you find

yourself at the same high school as your Mom and Pop — great you might think. Trouble is your Mum takes a fancy to you and isn't at all keen on your future father!

It's down to you to play cupid and get them to fall in love. If you fail you might never be born.

First impressions of the game are not too favourable. It would be easy to form the opinion that the game is just another third-rate film game which is definitely not the case.

Once you get the hang of it you become completely hooked and determined to pair your Mum and Dad off and escape back to the future in the nuclear powered DeLorean.

Apart from you and your parents there are two other characters in the game — Biff the bully, who will punch you any chance he gets and generally spoil your plans and the Doc — who can help you by getting rid of Biff.

Marty is controlled by a combination of joystick control and icon (picture symbol) selection

Marty walks left, right and forward through doors by simply moving the joystick in the required direction. He can move faster by selecting the skate board when its symbol flashes yellow.

There are four other icons that come in handy. The coffee cup can be used to freeze Biff for a useful half minute, the space suit makes your Dad (George) follow you, and the guitar will freeze your Mum (Lorraine).

Once you have George and Lorraine in one place you can go to the library and select the volume of love poems which, when taken back to where your Mum and Dad are, will get them feeling a bit more affectionately towards each other.

There are also two pictures in the screen shot above. These are made up of eight strips each. When you are doing well the pictures begin to fill in, but if you start to lose control the strips peel back again.

In order to make you escape back to the future you will have to fill in both pictures, then race back to the Doc's room, enter, come out again into the street where the car is waiting and hop in. The rest the program does for you.

There is also a musical reward for success if you do win, the theme from the film — *The Power of Love* — begins to play, but if you lose control again, the 64 starts bashing out a very fast rendition of *Johnny Be Good*.

The acid test has to be — does it stand up without the film? I have no doubt that the answer is yes.

It really is fun, and difficult, to keep all the characters under control. You need lots of different icons to affect the behaviour of each character and each icon — once selected and used — will only last for a short time. This means that the game is a race against time. A big like one of those circus acts with the plates spinning on the poles — with the guy racing around trying to keep them all spinning.

The one nagging doubt at the back of my mind is the game's staying power. Once you've escaped you may not wish to play again.

Eugene Lacey

THE YOUNG ONES
Commodore 64/128
Orpheus
Price: £7.95/disk

Totally brilliant concept! A game based on the anarchic cult comedy programme 'The Young Ones Crazy! Fascist! Snoot! Willybriot!'

I was a Young Ones fan but it's funny how when you write it

down the humour starts to sound a bit weak, a bit, well, childish. That's a problem, but perhaps not as much a problem as trying to get the humour over in the first place.

Mosaic had a good stab at it with *Adrian Mole*, but that was done on an adventure format. It was based on a book and hence quite 'texty'. Orpheus' effort at the Young Ones tries to do it as an arcade style adventure, sort of Willy style. The result is a disaster.

The idea behind the game is to play one of the characters and collect seven or eight items that will enable you to move out of the house. You control your character via screen options. Thus at every occasion you pull the joystick back to select action, speech or walking. You have no real control over movement apart from setting it off.

The worst part is the other characters just wander around saying the same things about objects. "Nobody move until Mike

Ha, what a scream! Toilet? Brilliant humour guys

the cool person picks up the thermos flask, is not funny especially after endless repetition.

My character (Vyvyan) just kept saying things like "I've got a really bad hangover, and all I can think about is picking up the guitar case". I took this as a prompt so I got him to pick it up, whereupon he wanted to put it back again. OK, reiteration - but it's just not fun nor is it compulsive.

After exploring the various locations which are graphically average and getting bored picking things up and putting them down to try and get things to happen I started to wonder if I was doing this all wrong. Now I'm certain that it was Orpheus who did it all wrong. They had a good idea but were completely unable to implement it.

Elite had a great idea with *Scrooby Dog* but couldn't get it working and shopped it to turn to *Hotshots* for an update! Orpheus should have done the same thing, perhaps there was too much at stake.

Mike Pattenden

Conceptual humour in *Spaced Out*, whoops, ruined the joke!

SPACE DOUBT
Commodore 64/128
CRL
Price: £9.95

Space doubt, peddler? Funny software from CRL. Their latest offering comes complete with a little comic for you to read while waiting for the game to load. The comic follows the adventures of the crew of the U.S.S. *Omnius* and it's mission to transport a cargo of food to the hungry

workers of the planet Niblonis. As tends to happen in these stories, The *Omnius* is barely 200 light years from earth when it comes under heavy bombardment from a meteor storm. But the meteor storm is not all it appears to be and is in fact a swarm of dreaded bogloids - they live to eat.

The bogloids break through the hull of The *Omnius* and make straight for the cargo hold wherein are stored the food supplies for the hungry workers of Niblonis.

Commander Sock, Colonel Skivjibod and Major Underpart are in turn swooken from cryogenic sleep to blast the Bogloids, but only Underpart survives to complete the mission and land on Niblonis. The only problem is that by this time the Bogloids have eaten all the food that hasn't been blasted.

Space Doubt is one of the most enjoyable comics I've read since they put up the price of The *Besno*. I stayed with it through to the last page. The graphics are very good indeed, though it's a bit of a shame they're only black

and white. The game on the other hand is pretty boring stuff. It more or less follows the story in the comic, you taking the role of each of the three space heroes. Unfortunately five minutes of blasting Bogloids against different backgrounds and I was dying of boredom.

Bogloids in the freezer Stick to the game!

Comic Bakery — Joe tells you what he thinks of the game

COMIC BAKERY
Commodore 64/128
Imagine
Price: £7.95/cass

Another in the Imagine Konami series and before I say anything else let me tell you this is by far the worst yet!

You play the part of Joe the baker, who has to protect his loaves from the bread snatching Raccoons. If you think this sounds remotely interesting you would be wrong.

As the game loads you will see a pretty title screen with some excellent music which may sound familiar if you own either *Rambo* or *Transformers*. There are no game options at the start other than "Press fire to play".

The screen is divided into two halves: on the top you have the scanner showing which machines you must turn on (because the trouble making raccoons have turned them off) on the bottom half is you, Joe the baker, looking like a fat over paid chell. This part of the game is wonderfully drawn with great use of colour. Your job is to save the factory with the aid of your "Raccoon Stunner"!!

The pests come from three different directions — left, right and above. They are all shootable but an extra bonus is earned by stunning the ones on the lower level and kicking them across the floor. This is by far my favourite part of the game.

The ones at the top pinch the loaves of bread which are rolling from machine to machine.

Although I loathe the flea bitten *Beat the Raccoons* to stop them scoffing your bread,

creatures I must admit they are graphically perfect.

Another nice touch is when Joe bumps into a raccoon, which makes him jump, and double up as if he had received a baseball bat in the groin.

When you have helped so many loaves of bread to the safety of the van, a screen is shown with a picture of a bakers shop, which gives you a rating such as "Yeh" or "Fine". While you sit there wondering what's next,

don't bother, I'll tell you, ab-olutely nothing! Just the same boring stuff with a change of colour.

One word sums this up: As baker Joe so rightly says, "UGH". I couldn't agree more.

KILLER

GAME

Makes the impossible possible

Get to any level and Never get killed

Walk through gunfire without a scratch

ONLY £14.95

- Q. What is Game Killer?
- A. A revolutionary powerful cartridge that now lets you play all those impossible games without being killed! Walk fearlessly through gunfire, disaster and danger without a scratch.
- Q. Sounds difficult.
- A. It's simple. Just plug it in the back of your computer and press a button.
- Q. You mean I can play my games all the way to the end. I don't believe it!
- A. Yes - incredible but true! It works on all those thousands of games with sprite collision.
- Q. Sounds like science fiction! I suppose it's available in 2001.
- A. It's here now!
- Q. I'll believe it when I see it!
- A. Exactly, so why don't you go to your local computer shop.

The Robtek Gamekiller is available from all good computer dealers.

There's a fleet of fighters on your tail. A quick direction switch should shake them off.

URIDIUM
Commodore 64/128
Hewson
Price: £9.95/cass

This is it — shoot 'em up so good you feel as if you should be inserting two ten pence pieces into your 64 before each game.

It really is just like blasting away on a coin op. Programmer Andrew Braybrook is happy to acknowledge that *Uridium* has its roots in pay per play arcade games.

"I suppose it's a derivative of *Defender*, *Scramble* and half a dozen other arcade games all rolled into one."

The aim of the game is to destroy sixteen space fortresses that are cruising slowly towards your home planet. The fortresses are called Super Dreadnoughts — each one taking its name from a different metal.

They are all at least sixteen scrolling screens long and each is protected by dozens of smaller fighters.

Bonus screen
It helps to
listen
carefully
rather
than
watch

Asaugh! Zapped by a mine! Once they home in on you they're hard to shake off.

Paradroit fans will spot in its tent likeness as Andrew Braybrook's trade mark — shiny metal, is very much in evidence on each of the Drednoughts.

When you see the quality of *Uridium* it is difficult to believe that less than a year ago Andrew didn't even own a 64.

When you press to begin you are treated to an excellent piece of animation as your Manta fighter emerges from the interplanetary transporter flaps around, showing its wing span

and then — zoom — it bursts forward and homes in upon a Drednought at full speed.

In seconds a wave of fighters sweeps past you. You fire like crazy but are lucky to down any of them on your first few attempts.

Bonus points are awarded for downing the Drednoughts' protection fleets so you about turn and give chase. It becomes clear that manoeuvring the Manta is not easy. Pretty soon you are swaying back and forth in your

The fighter on your tail has just fired a rocket at you. Easily avoided but keep your eye on what's ahead otherwise you might run slap into a wall

The shoot 'em up was the last '86. But here it is... a shoot 'em up type of game you would expect up better than anything that has to make the running in the Best Game before that your collection Games league at the beginning of will be pretty dull without it.

Eugene Lacey

eat as you struggle to turn in time to blast the enemy.

But the Dreadnought's Protection Fighters are not all the Man (a pilot has to worry about. There are also the deadly homing mines which come at you from the fleshing generator ports. The only way of dealing with these is to beat a hasty retreat.

To destroy a Super Dreadnought first of all you have to land on it. To do this you have to wait for the "Land Now" signal to flash and then fly to the extreme right of the Super Dreadnought where you will find the runway.

When you touch down you pass into the fuel rod chamber where you can select "Duel" or your bonus. Either way, you have to leave the chamber before the countdown reaches zero.

When you take off you fly as quickly as possible away from the vapourising Super Dreadnought, strafing any remaining surface craft as you go.

On later Dreadnoughts there are certain ships that can only be destroyed after the Dreadnought starts to vapourise. This means that you will have to be extremely sharp on the joystick to earn bonus points at that level.

A level completed and the dreadnought disintegrates. Head back and pick off any targets you missed

CRITICAL MASS

You'll probably be seeing a lot of this screen

CRITICAL MASS
Commodore 64/128
Darell
Price: £8.95

Critical Mass has that look about it that suggests it might be quite good. Looks of course can be deceptive.

The action is set on an asteroid where an advanced anti-matter conversion plant has been occupied by aliens after a surprise attack. Your mission is to fly in and disable the plant before the aliens can destroy it and cause

an enormous black hole. OK it's just the plot.

You do this by flying east in your craft, avoiding rock masses, alien defences and mines, penetrating the plant wall and taking out the guard posts. Sounds like a super fast shoot out eh? Well it's not. The reason for this being that control of the craft is so finicky — the one directional stuff like in the old asteroids — that you have to proceed at a snail's pace to avoid hitting the obstacles. This however also makes you a sitting duck for the enemy forces. Swinging the ship round to line up a target is a laborious struggle

Should you lose your craft you have the chance to get another, by flying off in a jet pack in search of a replacement pod. The controls here are even more difficult, and for some reason you become a delicacy for the worms which pop up from the ground. You'll certainly have to master this if you want to get any further with it, because your ship disappears like nobody's business and the fact that you cannot blow up obstacles exactly makes the fast trigger stuff rather.

Graphics are clear if a little on the small side, but the sound is

poor. Bad sound effects and lousy tunes. It mightn't look so duff if it weren't for the fact that I'd been playing *Undrium* constantly before I got round to this. There again maybe it would.

If you want a really tough challenge then this will give you one, but I don't like games which substitute imagination for rigidity controls.

Mike Pattenden

Back to base in your Jetpack for another ship

Death Wake: A major contribution to the war against software piracy

DEATH WAKE
Commodore 64/128
Quicksilver
Price: £8.95

Quicksilver are being remarkably reticent about this latest weapon in the war against software piracy. Stunningly effective, yet so simple it's surprising

no one thought of it sooner. In *Death Wake*, Quicksilver have managed to produce a game that is so boring no one in their right mind would want to copy it.

A battle simulation straight out of WWII, the objective is to penetrate the enemy's defences and blow up their atom bomb factory. First you must complete the air assignment phase. A map shows the location of your own

and the enemy bases. You can mount an attack on any enemy bases from up to three of your own.

Having made the strategic decision as to which bases you will attack pressing the scramble button causes three little puffs of smoke to appear on the map, thus putting the enemy bases out of action for a while. The computer/army then does the same to your bases. If the sounds the slightest bit exciting then I've been overgenerous in my description of it.

Now it's time for the torpedo planes. Your battleship, The Undaunted, sits at the left of the screen flanked by two escorts. Three torpedo planes appear at the right and approach The Undaunted, as you shoot at them. They drop their torpedoes and, with a nimble flick of the joystick (it doesn't really have to be that nimble) you swerve out of the way. This goes on for about two minutes then it's back to air assignment, which appears after each arcade screen.

Next up are the torpedo boats which you must fire at before

they fire at you. A bit more difficult than the planes, but no less boring. After another bash at the air assignment, mines. The mines scroll on from the left and you steer The Undaunted out of the way. The battleships which follow are reloaded torpedo boats and the bombers are identical to the torpedo planes except they go on for ever.

At this point I switched channels on the t.v. It was The Monday Meltdown — The Spanish Gardener with Dark Bogside. A slushy sentimental job with Dirk as the gardener who forms a friendship with his boss's son and ends up in the nick on account of being framed by the jealous butler. Not really my kind of film, but a million times more enjoyable than playing *Death Wake*. *For thanks Ken we reckon anything with Dirk in it's OK* — Ed

POST CODE

CITY

KANE
Commodore 64/128
Mastertronic
Price: £1.99

I've not always been that enamoured with Mastertronic's output, preferring to think that you're better off hinging onto those two sovs for a better cause. Until now that is.

You may remember our review of Ultimate's *Outlaws* a few issues back. Well here's a better game all round that weighs in at a quarter of the price.

The action takes place across four screens each taking a typical - well sort of typical - western scenario for its inspiration.

You are Marshall McGraw a Wild West hero, charged with the task of making peace with the Wagon Indians (nice non racist touch! Long term peace however, is jeopardised by the machinations of the NAST railway company who plan to drive a track right through sacred Indian burial ground).

As McGraw you have to keep the natives sweet whilst fighting off a variety of renegades and mercenaries hired by the NAST Railway Co.

Your first task is to win the

respect of the Wagon. Strangely enough, this is done by shooting down herds of tasty ducks. Should have a Jack Charlton licence on it. Well perhaps, but you're shooting the little brights down with a bow and arrow not a 12 bore.

Good shooting earns you peace medals and it's these tokens of Indian esteem that you have to get back to the President to conclude the peace, though the sound a stricken duck makes should have been reward enough I feel.

So you rush off from the duck shoot, mount your horse and charge across the plains to Kane. This I found to be the most difficult bit because if you miss time a jump you're painfully unsaddled. If you make it to Kane you can expect an ambush by the local hired ruffians. (Thought if they liked soul music would they be called the Kena Gang?)

Defend yourself from the attack, by dodging about picking men off. All their actions are designed to stop you getting that train outta town to Washington intact with the peace medals. Race to the depot and try and grab that train before it's out of reach.

This game has got enough action in it to fill a John Ford western. It's addictive and it's fun. The sound effects are more than adequate and the graphics are clear and colourful with smooth scrolling. McGraw's bow action and the horse's galloping are particularly good.

At last I can honestly say two quid well spent.

TALES OF THE CAT Commodore 64/128 Budge Budget Software Price: £2.99

First impressions of *Tales of the Cat* are not too favourable. Oh no, not another Frogger rip-off is the first thought that enters your head when its crude graphics first appear on screen.

You have the busy road with cars whooshing by, the cat can crawl left and right and attempt to cross the road. But apart from that — there ends any emulations to Frogger.

The aim of the game is to pick up the articles on the other side of the road. These are a com-

pass, scroll, fishbone, can, tin opener, a mouse, and some bird seed.

Once you have picked something up by simply nipping across the road and making contact with it you can give the big black dog the slip and go on to the next screen.

Each new street is an even tougher challenge for our unfortunate moggy. Screen two, for example, has a rather awkward break dancer, screen three some falling flower pots — and so it gets worse...

Each new hazard is added to the ones from the previous ones so that before very long you are dodging cars, dogs, falling flower pots, breakdancers, and falling milk bottles as you attempt to pick up your item.

To be honest *Tales of the Cat* is not the best game I have ever seen — the animation is not convincing and the game is pretty easy.

In its favour *Tales of the Cat* would be highly suitable as a game for young children.

But for hard nosed gamers

looking for a worthwhile challenge on the cheap then don't expect to get it here. Even an average gamer would crack this in an afternoon.

Eugene Lacey

COLLAPSE Commodore 64 Firebird Software Price: £1.99/disk

Collapse is Firebird's latest offering in their budget software range. It is an arcade game with a difference, and the idea behind it is something very original.

On the first screen you are presented with a matrix of dots in the middle of it there are a pet tern of grey sticks.

The object of this weird and wonderful game is to turn all the grey sticks blue and then to collapse them, all in one go if possible. That may sound all very straightforward but playing the game is a different matter!

You take the role of Zen, who luckily is a magician — but not all the time. There are two modes of play. When Zen has magic, and when he doesn't. When he has magic Zen can float and sprinkle Magic-dust which kills the time-eating monsters.

Why doesn't he keep his magical powers all the time? Because he can only turn the sticks blue when he has no powers (*Obvious really* — Ed.)

But of course as in any game there are other hazards. You have a time limit, and there are time-eating monsters, who will gladly drain one hundred units of your precious time. These monsters are easily stunned with a sprinkle of your magic dust.

When your time limit runs out

Tales of the Cat — not the Budge's best bargain.

Collapse — *Firebird's* latest introduces some original ideas as a bargain price

let you go until you've retrieved the lost amulet of immortality.

This is your cue to head off into the maze of caverns with only a few leaves from your maths book stuffed in your pocket to map your way with.

Naturally there are hordes of nasties hungrily awaiting your entry into their territory — among whose number are hellhounds, skeletons, orcs, bats and vampires.

As you explore you will find clues and useful items such as healing potions, and scrolls that furnish you with information.

The screen is split into three different areas. Top left shows a birds' eye view of your movements with the caverns unfolding as you progress. Top

With the price of the average 64 game now hovering around the ten pounds mark, budget games are now a popular alternative. As the demand grows so the quality has improved.

This month we begin a regular section devoted to the cheapie and find that we have a game so good that we nearly made it a Screen Star. Instead *Kane* is our first Cheapo of the Month.

As the big software houses whinge that budget games should be excluded from the charts, Commodore User says they're often a lot better than expensively produced turkeys beefed up with a costly licensing deal.

you lose one of your three lives! If you complete the first sheet you will come to another, which has a different pattern of sticks. After that there's only ninety-four to go! It is possible on all of the ninety-six sheets to collapse all of the sticks on one go, although I haven't managed that.

Collapse is a good and very playable game, which proves that good games can be produced at pocket-money prices. Well worth buying.

MASTER OF MAGIC
Commodore 64
Mastertronic
Price: £2.99/disk

Mastertronic's range of games gets bigger and bigger every month, and as the catalogue increases so does the quality. This month's selection of cheapies have all been excellent.

Master of Magic is a slice of arcade adventuring that even Ultimates could learn a few things from. The plot has you dragged underwater by a powerful hand whilst exploring some underground caverns. It could happen to anyone! The hand belongs to Theric, master of magic and evil, and he refuses to

right is the printout which tells you exactly what's happening, ie 'The hellhound bit you'.

The centre space is a menu which allows you to choose from a set of options (normal adventure type things like examine, run, attack). At the bottom of the screen you're given a close up of whatever confronts you, be it a door or a nasty.

But the problem with the display is that there's rather too much going on. The birds' eye view of your movement would have been better off expanded to cover a little more detail so making the bottom area redundant, whilst the information display scrolls too quickly when there's a lot happening. Nevertheless you get used to it all eventually.

The gameplay is nothing

special for its type, but it's good enough, and for three quid it's great value.

I must put a paragraph aside to rave about what is one of Rob Hubbard's best pieces of music yet. It's original and it suits the style of game very well. And blow me if I wasn't humming the tune all the way home. Buy this game for a good tune if for nothing else!

Mike Pattenden

Master of Magic — "humming the tune all the way home".

C16

KUNG FU KID
Commodore 16
Gremlin Graphics
Price: £6.95/disk

Oriental fighting games have finally made it on to the C16 with this and Amco's *Thai Boxing*, but can you expect a decent *Fist* equivalent?

Emperor To Ming has banished you to the eighth sub level. Exactly why he has done this terrible thing is not altogether clear but according to Gremlin it has been brought on by your own folly. That will teach you to fool around with the Emperor's daughters.

To get back to where you came from you must fight your way past eight different kinds of opposition, starting with the Emperor's minions.

You, The Kid, are standing in the middle of the screen dressed in what looks like a Windscale worker's overalls but if I guess supposed to be a pair of kung fu

pyjamas. The minions attack from either side, but there are usually more coming from one side than the other. You have four opponents. 1. Stand your ground and let the

It's time for a bit of oriental minion marching with the Kung Fu Kid

GULLWING FALCON
Commodore 16
Gremlin Graphics
Price: £6.95/disk

I don't think there's ever been a good version of the Buck Rogers arcade game for the 64 let alone the C16.

Underused Gremlin come forward with their offering and it's certainly a toughie.

This is probably the most difficult game I've ever played on the C16. One thing's for sure, *Gullwing Falcon* is not a game for rookie pilots.

It's one of those 3D type games where you get the illusion of actually flying into the TV screen.

The object is simply to shoot down the invading space pirates. On the first level there are 25 of these; if you manage to reach the second level there are 35, and so on.

If the pressure gets too great you can fly between the pillars of stone, or so it says on the inlay. The pirate ships dare not travel between the giant stone posts. Who can blame them? All it takes is one pixel in the wrong direction and epilat.

I found it took all my energy and concentration to avoid smashing into the pillars of stone which zoom up on you at about warp 1.0. When I wasn't doing that, I was doing my level best to avoid colliding with the space pirates.

On the rare occasions when I wasn't doing either I actually managed to shoot one or two down.

There's ninety-nine levels with a maximum of ninety-five aliens per level. *Prosa*, that's tigger crunching in the extreme.

If there's one criticism I'd make it's that the joystick works the wrong way round. By which I mean that your ship goes left and right as it should, but when I pulled back on the joystick I expected it to go up and it did the opposite.

I reckon the programmers have done really well to get a 3D Buck Rogers type game out of the C16, but a game needs more than just technical merit.

If nothing else *Gullwing* is the kind of game that's so difficult it fits you with even greater determination to beat it. A must if you're looking for a really tough arcade challenge.

Ken McMahon

Graphics	★★★★
Sound	★★★★
Toughness	★★★★★
Staying Power	★★★★
Value	★★★

minions bump into you. This is not recommended. As well as being quite boring it will deplete your energy reserves very quickly.

2. Run away. Equally ineffective. Either the minions catch up with you, or you bump into those coming in the opposite direction.

3. Jump over them. This is O.K. for single, isolated minions. But if there are several you'll get caught on the way down.

4. Punch them. In 99% of cases the most effective way to deal with minions and of course the only way to score points. Timing is critical, mistime it and the minion will bump into you, further depleting your energy reserves.

Of course the most successful method is a combination of all four of these. When you've punched sufficient minions on the nose (indicated on the minion

meter) you get to have a bash at the next bunch.

Future opponents could include various oriental names from any one of shangans (what's a shangan?), daggers, swords, or magical pots.

To tell the truth I don't know which, I got pretty fed up after half an hour or so of minion man ching. The game just doesn't have enough variety or incentives, to hold your attention for long enough to accomplish anything.

If you're looking for a C16 version of *Exploding Fast*, you'll be disappointed with this.

Ken McMahon

In keeping with our policy on the C16 there's more news and reviews in the mag than ever before to help out all you beleaguered owners out there. This month we've put together a noteworthy roundup set to a great competition along with our exclusive review of *Commando* and provided you with the first chart for C16 games. Look out for more next month.

WORLD SERIES BASEBALL Commodore 16 Imagine Price: £7.95/disk

As a C16 owner myself, I know how annoying it can be to see games compared with their C64 equivalents and, inevitably found lacking.

I wouldn't be doing it now, were it not for the fact that this version compares well in virtually

every respect with its 64 predecessor.

Assuming you have two joysticks and at least one friend you can play against each other. If you lack the necessary hardware or company you can play the computer — a formidable adversary. I chose the second option and found myself batting at the crease, or home plate I should say.

You get an eagle's eye-view of the proceedings from a point just behind the backstop. What this gives you an excellent view of the whole playing area, it's not very good for close up action.

For example, when you need to judge exactly when to hit the ball, you watch the giant video screen at the back of the stadium.

The normal rules of baseball apply. You get three chances to smack it one and make it to first base, or further if you can.

I found batting the most difficult operation of all. The direction of the ball seems to be controlled purely by timing rather than joystick direction. Nine times out of ten I was caught (by the same fielder) and if that didn't happen I just hit it straight back into the hands of the pitcher. Obviously more practice is required there.

Once I had mastered it to some degree hitting a home run gave me as much pleasure as it must have Babe Ruth.

Fielding was much easier to pick up. As pitcher you have the

option of varying the height and speed of the delivery by joystick position.

You can try foxing them with a high, slow one, or give it to 'em fast and low with a left hand curve. I only got hit out of the park once!

More usually, when the ball is hit, the nearest fielder is moved to it under joystick control and automatically picks it up. Again using the joystick you can choose which base to return it to. If you move and think fast you might just run somebody out.

The innings is over when three men are out and a match consists of nine innings per side.

World Series Baseball is every bit as enjoyable as the 64 version. It's a great fun playing the computer and I can imagine it would be even better against a real opponent.

If you don't already have one I'd recommend you buy a second joystick at the same time!

A game that has all the features of its 64 predecessor

A Buck Rogers game for the C16 with a really tough and exhausting test

The Winner, strap up please: Peter Chaplin of West Smethwick and Snog the cat. Well done chaps the games are on the way along with a tin of Gook-flavoured Whiskas

This terrorist like Rambo is Asif Lakhani of Upper Holloway. In London Nice one Asif, I particularly like that replica of an M60. It is a replica Asif, isn't it?

This bare chested hunk of a Commodore User reader is Elta Harsverson of Wexminster. A real 'poser' he is too, according to his brother Adrian who was kind enough to send us this snap. Well, I suppose Sylvester is a bit of a posser himself and it doesn't seem to have done him much harm

WINNERS

RAMBO LOOKALIKE COMPETITION

"Don't push me!" OK, OK, I won't, but at least let me tell you about our Rambo lookalike competition — featured in the January issue.

We figured a lot of boring photos would be taken at Christmas. You know the kind I mean — Mum and Dad, and the kids, standing around the Christmas tree, looking down fondly on the new Trivial Pursuit Deluxe set.

Yuk — we just had to get a bit of life into those snaps so we asked our readers to dress up as Rambo for a chance to win one of thirty pairs of Rambo by Ocean and Commando and by Elite.

The response was, well, interesting. Dozens of you fancied yourself as Sylvester Stallone's double, whipped off your shirts and reached for the instamatic.

Here are some of the winners and before you start writing in we are sorry that there is not enough room here to publish everyone's picture. Maybe next time, in our shortly to be announced Madonna lookalike competition (C'mon you software houses howsabout a Madonna game).

A close second is Mark Jackson of Hucknall, in Nottingham. Mark strikes a mean pose and was the only entrant clutching a grenade. Nice touch, Mark

Stephen Oakley wins a copy of Rambo and Commando for his excellent greasy chest and scars. I am not sure what you are doing holding that umbrella though, Stephen

Geoff Capes Competition Results

We had so many entries to our December Geoff Capes competition we had to hire a strongman to carry the mailbags upstairs. Tricky question this time and only a select few got the answer completely right. The three names we wanted were: Brian Jacks, Frank Bruno and Graham Gooch.

Ten lucky winners get to flex their muscles with a pristine copy of Martech's Geoff Capes Strongman game. Congrats to: Matthew Skinner of Bath, Andrew Foster of E Yorkshire, James Banning of Portsmouth, Anthony Hughes of Mid Glamorgan, Michael Robertson of Formby, Marc Hagan of Merseyside, Neil Shepherd of Evesham, Adrian Coutas of Bradford, Simon Chambers of London and Christopher Bloomfield of Welling.

£9.95/cass

Every so often talented programmers sit down and decide they're going to create a piece of software that's REALLY DIFFERENT, 999 times out of 1000 the results are disappointing. This program isn't the odd one out.

The idea is that as sheriff of Gold Gulch you have to maintain order through a series of 'conversations' with different members of the town's population. Depending on how you handle the chit-chat you may find some of the characters pull a gun on you, in which case you have to respond with a lightning draw and blow the guy for good off the street.

The encounters are depicted on attractively drawn (but motionless) backgrounds. All that moves are the characters you meet and your own right hand and gun, looming large at the left of the picture. The conversation is revealed in five lines of text at the bottom of the screen. The first line reports the words of the townspeople. The next four indicate your possible responses, with the one you select helping dictate how the conversation continues.

This multiple-choice approach means the game can be entirely joystick controlled. The trouble is it doesn't leave much room for skill. Much of the time you don't

really have any reason other than idle curiosity to choose one response over another. And after playing the game a few times you're likely to have exhausted the potential of many of the conversations.

That leaves the shooting which, apart from having a nicely animated hand to look at, is also pretty uninteresting. A joystick movement bumps the gun out of the holster and man-cursority explains a cross hair cursor on the screen. You aim and fire, so the only point of entertainment is

Superb title screen — shame about the game

trying to predict when someone's about to draw on you and keeping your reaction time short.

There is quite a nice touch though, when you yourself get shot. The screen goes dark and all you see are bits of text reporting the conversation of other people saying things like: "Bring a doctor!"

Another big bore is that at the end of each conversation a new backdrop has to be loaded into memory. On the cassette version at any rate, this means having to

wait for about a minute every other minute. Hardly conducive to getting any momentum or excitement going.

If you can avoid a fatal shooting and make it all the way through the tape to sundown you get a screen which gives you a rating on seven different points including: how well you maintained your authority, the number of crooks you captured, how well you did romantically, the number of bad guys you shot, the number of good guys you shot, etc. This gives you a minor incentive to try again, but only minor.

The game lacks panache. Original, yes, absorbing, no.

With an ugly mug like this guy's got it's no wonder he disguises himself as Max Headroom. But who is he?

Edison heading for the lift.

Max Headroom

Look — everyone who has written about the *Max Headroom* game so far begins with bitter an intro or headline that goes something like: **M-M-M-Max H-H-H-Headroom. Well I'm not going to, right. There is no way I am going to be accused of being stutterist.**

Now on with the game. The tower block you see in the screen shot is the

home of Network 23 — ace reporter Edison Carter's employers.

Edison is searching the building for the black box which holds the Max Headroom Personality Generator.

To help him he has to hack into the Maxhunter computer that acts as his ears and eyes in the midnight search.

Edison must also establish control over the lifts by typing in code numbers and avoiding the security guards and

the hired assassins who work for the evil hacker Bryce, Max's creator.

The game will be on sale in early March and, don't you know it, we'll have a review in the next issue.

Can you tell us who plays Edison Carter in the film for a chance to win a pile of Max goodies including the game and the book.

Entries to Max Camp, Commodore User, Priory Court, 30-32 Farringdon Lane, London, EC1R 3AU.

Exploring Network 23's office block.

Empire

Whispers are reaching CU of a new Gold Range game from Firebird.

Our spy also tells us that they are talking confidentially about it being the next *Elite*.

The game in question is *Empire* and all Firebird are saying about it is that it's a space trading game.

One of the reasons Firebird appear so tight-lipped about the new Gold games, and everything else for that matter, is that you can never get through to them on the telephone to find anything out.

You would think, wouldn't you, that a company owned by British Telecom would be able to sort out a few spare phone lines. You wouldn't — Oh well! More news on *Empire* (by carrier pigeon possibly) next month.

We've all suffered the horror and boredom of exams, possibly the worst aspect being the torture of revision. Surely the answer has to be in computerised programs that make life easier and refreshingly varied. Hill MacGibbon think so, since they've combined 'O' Level learning software with Pan's invaluable study aids. We asked a group of teachers and pupils their reaction to the packages . . .

Maths Teacher's view

This package like the others in the same series contains a revision textbook and two cassettes. The software consists of two parts: diagnostic tests to assess performance and "testing modules".

The tests are certainly of an appropriate standard for 'O' Level and may be helpful for revision at the end of a course; however I am not convinced that the power of the computer is utilised at all.

The test questions are contained in an accompanying booklet, the student simply types in the answer (the questions do not appear on the screen). When all the answers are entered the test is marked by the computer and any incorrect answers corrected. I can see nothing here that could not be done in a good workbook.

There are several "testing modules", thirty in all. On the Commodore 64 each has to be loaded separately and always by using the menu program at the beginning of the tape, this is very tedious.

The modules vary in quality, again I feel they do not use the power of the computer. The examples given are too repetitive and do not really test application of the syllabus, a skill vital at 'O' Level. There are some nice diagrams but there is much room for improvement. Personally I would buy the book and not bother with the software.

Colleen Young
Croham Hurst School
S. Croydon

Students' View

My pupils were not impressed with this program at all. Like me they were not impressed with the loading procedures. They found the presentation dull and not always clear. Also, they disliked so many instructions given in the booklet, they felt that more instructions on the screen would make the program easier to use.

If an incorrect answer is given a hint appears on the screen, these were rather variable in quality and several pupils found them no help at all. They would have liked a greater variety of questions, within each module there is very little variety.

They found an incorrect answer in one section which did not do much for their confidence in the program. Another fault they found was that the computer regards "a" and "A" as different answers for multiple choice, this they thought very unfair and quite unnecessary.

Exam

Bad marks for 'O' Level software from Croham Hurst students

Faults like those mentioned above are most off-putting and children lose interest quite quickly even if the program content is useful.

French Teacher's view

The "Pan Course Tutors" package seemed to me a splendid idea since I have frequently recommended the Pan textbook. However, on closer inspection, this package is disappointing.

I was dismayed to find that my answers on the Present, Perfect and Imperfect tense sections were often deemed incorrect, only to be corrected with my original answer! Another problem is the use of accents which is indispensable in French. Duly warned that a missing accent means a wrong answer, I was unable to enter accents successfully using the notation given with the result that I scored 66% on a test which I had answered 100% correctly. Imagine the effect of such errors on a nervous examination candidate. In one case I was given a totally erroneous

rule. Another irritation in this program is the inability to accept an alternative but correct answer.

Sarah Wilkinson
Croham Hurst School
S. Croydon

Students' View

Linguists are notoriously fussy but my pupils' reactions should also be considered. Most felt that the presentation was good, although in one section pictures were missing and in another illustrated items were unrecognisable (Time was wasted deciding whether Pierre was fishing or painting!).

The tests themselves were confusing mainly because the questions do not appear on the screen but in the manual. The tests could have been done just as easily on paper.

In my opinion the program does not make a valuable addition to the textbook. The exercises given in the program do not seem to use the potential of the computer

I doubt the value of a revision course which has not been adequately checked. This is a great shame as the novelty value of the computer would perhaps encourage less motivated pupils.

flop!

'O' Level revision packages reviewed

Physics Teacher's view

This package is based on an excellent revision book, but in practice things were unlikely to proceed so smoothly. For I feel that many of the middle or lower ability candidates will need help from their parents in reading and mastering all the initial instructions in the student guide.

The programs themselves still have a number of faults that need rectifying. A missing negative sign in one of the answers will cause great confusion. But that is nothing in the frustration I felt when I twice had to reload the program after getting trapped in a loop.

The learning modules would be greatly improved if all the necessary data for a question was shown in the screen diagrams — at present, data given at the start frequently disappears by the time you need it.

It would also save the user a great deal of time if he or she could simply move on from one learning module without having to reload the whole program. With the package in its present form its value is limited since a great deal of time is wasted loading the programs.

C.R. Whyatt MSc M Inst P
Head of Physics, Heathfield School
Surrey

Students' View

This is a tale of two packages: a very good revision book with clear, simple accurate instructions, and a slow, badly designed program.

The book is one of the high quality Pan Study Aids and stands alone as an excellent reference for exam revision. It is referred to throughout the software whenever the

student is weak in some area of the work. The software, however, was a different story.

The system used old slow loaders — a bit dated in this age of turbos — and due to terrible tape management, each of the dozen or so modules required a complete reload from the beginning of the side! The programs are also written in Basic which did nothing to compensate for the time already used in loading. The overall effect is that lengthy periods of potential revision time are wasted waiting for the software to load.

Perhaps the most disturbing feature of the software is the existence of bugs in the answers. In one instance, two virtually identical questions have alternately positive and negative results — a surplus minus sign being the cause for concern. Add to this the dull presentation of the software and students become VERY discouraged in their work.

Daniel Gilbert

Chemistry Teacher's view

My first gripe about this program is that it takes too long to load and there's no excuse for this, since turbo loaders are now almost universally used. Also, there's too much reference to the question booklet — students will have enough books in front of them without this. I feel the questions could have been put on the computer.

The book itself is quite good but a bit out of date — it's a 1981 edition. It is therefore missing some syllabus elements.

I also found the style of some of the questions confusing, but hints given by the computer were quite good when a question was answered badly.

My other major criticism of the package would be that a student trying to run through several modules has to reload each

section of each module individually from the initial menu. If a large number of modules are attempted in one session, this can be a very lengthy process.

A. Andrews
Heathfield School
Surrey

Students' View

As with the other package I reviewed, this suffers from inadequate software support of a good revision book.

The presentation of the questions in this package, however, were confusing, as well as boring. In several places the questions are so badly worded that the student HAS to answer them wrongly in order to understand what is being asked, from the hints supplied.

Unforgivable errors abound, too: in one place while the computer is printing and showing user inputs in lower case it requires the user to enter an upper case answer. If this is not realised, the user can become extremely confused when his answers are wrong despite confidence on his part to the contrary. In another the graphics are illegibly small whilst in another a "rubbish" sprite appears, obscuring part of the 'hints' screen.

As with both packages I used, the disastrous speed of program, loader and filing (i.e. menu) systems occupied more time than the revision usually did.

Knight Games

It comes to something when companies start hyping their next game before coming up with the one they had been promising for the last nine months.

We have become used to having to wait months for the games advertised in the magazines actually appearing in the shops but the delay in the launch of *Elektraglide* from English Software

must be close to a record.

Certain magazines previewed the game on the basis of the Atari version four issues ago.

Well it is finally ready to be released. We didn't get it in time to review in this issue but from what we have seen, it does look pretty special.

Set in the future its graphics are reminiscent of *Pole Position* in terms of colours and landscape.

Unlike *Pole Position*, *Elektra Glide* is a race against the clock game. There are no opponents to get in your way.

But it's no push-over either as there are obstacles — including tunnels and huge bolls — that loom in front of you.

Elektra Glide is also the first race game to introduce forks in the road. Imagine it, you are racing at full speed when suddenly you see a fork. Which way are you to go?

The second game being hyped from the English Software stable is a medieval combat game called *Knight Games*.

This features eight different quests: Sword Fighting, Duelling Axmen, Archery, Quarterstaff Bashing, Crossbow Shooting, Ball and Chain Flooting, Pikestaff Contests.

Knight Games can be played by one or two players and implements moves *Fist-style* — with different combinations of joystick positions.

Two new arcade conversions are being keyed as you read this at Elite's games workshop in sunny Walsall (sun — in the Midlands? — Ed).

Chief battle washer for Elite, Bernard Dugdale, told CU that they are going to launch *Bomb Jack* in February and *Ghosts and Goblins* in March.

Bomb Jack is a 64 rendition of the moderately popular arcade game in which you play a tiny rodent collecting fruits in order, as you bounce around the screen.

Fans of the arcade original will be well satisfied with the accuracy of the conversion which — as you can see from the screen shot — includes the famous pyramids scene.

If *Bomb Jack* is not quite your cup of tea then *Ghosts and Goblins* may be more to your taste.

This one has been licensed from Capcom — those violent sa an sa's that called *Cammandia*. From a stable like that it has to be good and, if you are fortunate enough to have played it in the arcades, or even more fortunate to have played it in the pub like me, then you will know that it certainly is the business.

You play a knight in shining armour who has to rescue a fairy maiden from the clutches of an ugly winged demon.

Ok, Ok, so the plot is not that original — but the game is great fun. A

Bomb Jack Ghosts and Goblins

shoot 'em up style adventure — where you pick up the items you need as you travel.

The coin-op *Ghosts and Goblins* was so vast that not many gamers were rich enough to master it. This is of course no

problem for the home version — where toughness is more a virtue than a handicap.

We will carry a full review of *Bomb Jack* in the next issue and *Ghosts and Goblins* shortly after. Watch this space.

C-16 COMPETITION

WIN

50 COPIES COMMANDO

Slash hit coin-op games are pretty few and far between these days. A recent exception was *Commando* from Capcom in which you have to cut down the enemy with an M60 machine gun so that you can return safely to base.

There are also boxes of grenades scattered around the battlefield that are useful to pick up and use for things like taking out enemy pill boxes, armoured cars, and clusters of troops.

You couldn't honestly say that *Commando* takes the art of the computer game on in leaps and bounds but it is undeniably a fast and furious shoot 'em up with great graphics, superb sound and a huge army of fans.

Until now only 64 owners have been able to enjoy this chart-topping arcade conversion. But now it's the turn of C16 and Plus 4 owners to sign up for duty as Elite have converted the game for the baby Commodore.

As you would expect *Commando User* is first with the story and screen shots — but more than that we also have no less than **FIFTY** copies to be won.

To win your free copy of *Commando* all you have to do is answer the questions in the quiz below, provide a hint or tip, and send off the coupon before March 15th.

1. The motto of the S.A.S. is (a) Who Sues Wins (b) Who Dares Wins or (c) There's nowt as queer as folk, 'appen.
2. The war hero sent back to Vietnam in a recent Hollywood blockbuster was

- (a) Rambo (b) John Wayne or (c) Michael Hasseltine.
- 3 What is the highest military honour that can be awarded to a Commando in the British Army? (a) The Victoria Cross (b) The George Cross or (c) A mention in dispatches.

Entries should be sent to *Commando User*, C-16 Competition, Priory Court, 30-32 Farringdon Lane, London EC1R 3AU.

Please include with your entry a hint or tip on any C16/Plus 4 game you have played.

To help make life a little easier for you now we've presented you with such a large choice of 16 and Plus/4 software, we asked Ken McMeheon, ace G-Force member, to choose his top five games on the 16. He disappeared for a few days to replay his collection and finally came back with this selection.

1. Berks III - CRL

The best of the trilogy. An original and addictive arcade style game, something the 16 is well suited to.

2. Dark Tower - Melbourne House

Hectic platform action across 27 screens. Ambitious and impressive.

3. Bigger - Alligata

Another slice of platform mania. You play Roger the Dodger a master burglar hunting for keys to a safe. Hectic stuff.

4. Death Race 16 - Atlantis

Still the best racing game for the 16 and a good one too.

5. Timeslip - English Software

Original battle against the clock set in a Scramble 1 type scenario. Hellish fun.

These are Ken's current five, but I can't see them staying that way with the amount of new and dramatically improved software we're promised. Elite's Commando is just one example.

Arrow for the C16 and Plus/4

You may not like snakes but you'll like this game. Guide the snake (using the cursor keys) so that it bumps into the numbered boxes that appear and disappear. You score points according to the number on the box. But the more you score, the longer the snake gets and you lose your life if it bumps into itself.

C16 BOOK COMPETITION

Arrow was taken from Using the Commodore 16, a new book by Peter Gerrard from Duckworth. The book costs £9.95 but we've got fifteen copies to give away to the winners of this simple competition. Simply answer the three questions below:

- What was the original price of the 16 Starter Pack?
 - a) £139.99; b) £219.99; c) £12.99
- How many colours will the 16 display?
 - a) 16; b) 12; c) 64
- What is the 16's microprocessor called?
 - a) 1902; b) TED; c) 7501

Answers on a postcard to: C-16 Book Competition, Commodore User, 30-32 Farringdon Lane, London EC1R 3AU.

To all C16/Plus 4 Owners

Tynesoft's January big name and value for money releases – watch out for our new titles on your machine every month in 1986.
FOR THE C16/PLUS 4, STARTER PACK 2

APOLLO RESCUE
Apollo Rescue Mission is a two-part game. Challenging and full of action. Your mission is to, discover and reassemble sections of the crashed Apollo 16 scattered over the lunar surface. Assembly of rocket must be done in the correct order to enable you to complete your task and blast off to a new arrival. Beware of toxic dangerous aliens. This title is to be purchased with your laser. The two-part game of the mission is to retrieve Selenites floating in space with the use of a special arm to be returned to earth for servicing.

AUTOBAHN
A fast Arcade game where your driving skills are tested to the full. You'll break out several new acrobatic car stunts of the German Autobahn and put it through its paces.
You'll have to complete 4 challenging tests before you job is finished.

WATER GRANDPRIX
You are in the driving seat of a powerful speed boat entered in the Annual Water Grand Prix.
Skill is needed to navigate your boat along the twisting river. Avoiding the river banks and passing your fellow competitors using the way to victory.

VOX
You have to defend the 8 Cities of the planet, VOX, from the alien invasion force. You must destroy the alien unit by moving a ship over the screen and firing guided missiles to the right location. There are 40 levels. Each level consists of a set number of alien craft and an unlimited number of Ammo Saucers and Stunt Planes. To complete a level you must destroy all the alien craft, from Ammo Saucers and Stunt Planes.

R.R.P. £14.95

WINTER OLYMPICS

Your opportunity to compete with the best in the world in the following Winter events: Down Hill, Ski-Jump, Cresta Run, Speed Skating, Slalom Skiing and Curling. Best of Luck in your challenge to become World Champion.

R.R.P. £6.95

**EASY
ENTER**

by Bob Metcalf

Forget the title, this isn't one of those bouncing ball, hole in wall games. Much more original than that — it's all about ghostbusting.

Full instructions appear on screen but here's a taster: you've got to zap the devils and ghouls before they can get out of the dungeon. Careful though, you lose a life if you hit the yellow demon with the pitchfork. Sound and good use of sprites make this a neat little piece of programming.

Computer magic

This month, resident magician Phil Cornes has conjured up another selection of programming tricks and tips for the 64. But he's already started sifting through the little gems you sent him last month. Remember, we're offering a great Commodore User Tshirt to anyone who's magical offering Phil finds worthy of publication.

Trace your program

Very few programs written actually work first time (well, mine don't anyway) and one of the most difficult tasks is finding out exactly what route the interpreter takes through the program code. It occurred to me that it would be very useful if Basic could be made to list out the line number of each program line as the statements on each line were executed.

The following program stores a machine-code routine at address 49152 that does just this, printing line numbers on the screen as the statements of a Basic program are executed.

To use the facility, RUN the program below to save the routine in memory and then load up the program you want to trace. The trace facility itself can be toggled on and off with the statement: **SYS 49152**.

The way that this program works means that it cannot be easily relocated, so it has to be used at address 49152 as given

```
10 FOR C=49152 TO 49200
20 READ 8 : POKE C,8 : NEXT C
30 DATA 120,173,8,3,174,28,192
40 DATA 141,28,192,142,8,3,173
50 DATA 9,3,174,29,192,141,29
60 DATA 192,142,9,3,88,96,76
70 DATA 30,192,165,157,208,249,169
80 DATA 32,32,210,255,166,57,165
90 DATA 58,32,205,189,76,27,192
```

Program Trace Listing

Control your cursor

One very frustrating omission in the Commodore 64 Basic concerns the lack of a keyword designed to enable positioning of the cursor anywhere on the screen. Without such a facility, the design and production of trendy screen layout is very difficult and tedious.

The following short machine-code program is designed to overcome this problem by providing a SYS call which allows you to specify an X and Y screen co-ordinate pair in the range 0-39 and 0-24 respectively. The text cursor will then be moved to the specified co-ordinate ready for execution of the next PRINT AT command. The format of the AT(X,Y) statement is as follows: **SYS 49152, X,Y** where X and Y are the required co-ordinates, which can be any valid numeric expressions.

Although the routine starts at address 49152 here, it is completely relocatable and can thus be placed anywhere in memory without alteration. Obviously, if you relocate the program you will change the SYS number to the routine's new start address

```
10 FOR C=49152 TO 49184
20 READ 8 : PDKE C,8 : NEXT C
30 DATA 32,253,174,32,158,183,224
40 DATA 40,144,5,162,14,76,55
50 DATA 164,138,72,32,253,174,32
60 DATA 158,183,224,25,176,239,104
70 DATA 168,24,76,240,255
```

Print AT(X,Y) listing

Send your magic gems to: Computer Magic, Commodore User, 30-32 Fordington Lane, London EC1R 3AU.

Get rid of READY

We all know that on the 64, the commands for listing a program to the printer are as follows **OPEN 4,4:CMD 4:LIST**.

If you do this, you will find that the word **READY** appears after the end of the listing. Even though it is not part of the program. The reason for this annoying extra output is because the **CMD** command re-routes the normal output produced by **LIST** and **PRINT** so that it goes to a file or, as in this case, a printer. As **READY** is normally output to the screen on **LISTING** a program, it is also sent to the printer after **CMD 4**. The **READY** message is treated by the 64 as though it were an error message, produced to show that no errors have occurred.

It seemed to me, therefore, that getting rid of the **READY** on **LISTING** to the printer might be achieved by suppressing all error messages altogether.

The following program listing stores a machine-code program which can toggle the error message output on and off. After running the program (which is relocatable), the statement **SYS 49152** will toggle the suppression of error messages on and off.

```
10 FOR C = 49152 TO 49178
20 READ B : POKE C,B : NEXT C
30 DATA 173,0,48,174,25,192,141
40 DATA 25,192,142,0,48,173,1
50 DATA 48,174,26,192,141,26,192
60 DATA 142,1,48,96,131,164
```

No errors listing.

Append Files

On most computers it is a good idea, when you start programming seriously, to save a set of programs containing useful routines. The routines can then be appended onto the end of any program you are writing that requires the use of them. Sadly, on the Commodore 64 this cannot be done as no append facility has been provided in the Basic

— until now.

If you run the following program it will store a machine-code routine in memory, starting at address 49152. The routine provides the facility to append a Basic program from tape or disk onto the end of any Basic program already in memory. The routine is completely relocatable so it can be moved if necessary without changing the code.

Before using the routine you should make sure that the line numbers in the two programs do not overlap or it might create problems as this program performs on append

function and not a merge.

To use the routine, you just type **SYS 49152**, **"FILENAME"** for tape use, or **SYS 49152**, **"FILENAME"** for use on a disk file where **"FILENAME"** is the name of the files to append.

```
10 FOR C = 49152 TO 49230
20 READ B : POKE C,B : NEXT C
30 DATA 32,121,0,32,253,174,169
40 DATA 0,133,10,32,212,225,165
50 DATA 43,72,165,44,72,56,165
60 DATA 45,233,2,133,43,165,0,133
70 DATA 233,0,133,44,169,0,133
80 DATA 185,166,43,164,44,32,213
90 DATA 255,176,14,134,45,132,46

130 DATA 133,44,104,133,43,24
140 DATA 108,0,3
```

File Append Listing

Disk Head Cleaner

Here is a program specially for owners of the 1541 disk drive. After lots of use it becomes a good idea to buy a disk drive head cleaning disk to clean off any deposits of dust or dirt from the sensitive disk reading and writing heads.

The instructions on these cleaning disks usually say that you should arrange to use the cleaner in the drive with the heads loaded (ie red light on) for about 30 seconds. The only problem is that there are no standard ways of keeping the disk spinning for anything like this length of time.

The following program overcomes this problem by sending a special sequence of commands to the disk drive to keep it busy while the head cleaner does its job.

To use the program, you should just enter it into the 64 then insert the cleaning disk and execute the program. The disk drive should then start up. When the cleaner has been going long enough, press and hold the space bar until the drive stops.

```
10 OPEN 15,8,15 : OPEN 2,8,2 : ""
20 PRINT #15, "UA:";2;0;1;0
30 GET A$ : IF A$ < ">" THEN 20
40 CLOSE 2 : CLOSE 15
```

Head cleaner listing

DYNAMITE!

Like the real leader of the reds, Rasputin will reign over the most vicious and cunning arcade warriors of a world of his own.

The more you play, the more you know. Conquer the chaotic, save lands, and intrigue the gods of Venetia.

HOT

Gerry the germ is a fastidiously fabled. Gerry the germ gives his world a green, warty, and germicidal body. Gerry the germ has aches in his heart.

BY
JOHN RANLEY

At last, *Lord of the Rings*, the long-awaited sequel to *The Hobbit*, has landed on JR's doorstep. He's been wandering, fixed through Middle Earth ever since. Only the appearance of Doomdark's Revenge has managed to break the spell.

to millions of screen pixels back in 1983, and so it is natural to make *The Lord of the Rings* visual appeal the first point of comparison with its predecessor.

The running screen display comprises three overlapping rectangles with a description and occasional graphic representation of one's current location appearing in the foreground. The borders of the subordinate rectangles hold the images of your travelling companions, which move from the hindmost border to the foremost, and then back again, according to their proximity to the character you

blinking a cursor. But it's more fun still to start lacing your sentences with prepositions such as IN, ATTACK THE GUARD WITH THE SWORD AND TAKE THE SWORD FROM THE TABLE. A single entry could be composed of several such sentences, punctuated with commas and full stops as well as ordinary English, up to a maximum of 128 characters long.

Another technique pioneered in *The Hobbit* and happily continued in *TLR* is the ability to converse more or less naturally with your travelling companions and other characters, and even to

A signet of each of the characters you assume remains on view at the top of the screen while portraits of your travelling companions move in and out of the main illustrations.

have assumed.

First impressions are that *TLR* is very much more textual than *The Hobbit*, sometimes using up two scrolling screenfuls of text to describe a single location. The graphics are satisfactory but they do not mark any significant advance over those presented in *The Hobbit*.

Still, faithfully disappointing graphics should not detract from *TLR*'s excellence in so many other respects. Philip Mitchell's renowned English parses seems to have been refined still further to permit even more effortless exploration of Middle Earth using commands as simple as AS COMPLEX as one likes. Its 800-word vocabulary can cope with conventional commands such as EXAMINE THE RING or CLIMB THE TREE without

instruct them to take certain actions. For example, one can SAY TO MERRY "GIVE THE ORC THE EMERALD" — or in a shorthand version of the same kind of command, SAM "GIVE MAP TO FRODO". Intelligent and apt use of the SAY command or its derivatives is absolutely crucial to your successful completion of this adventure, since many situations rely on a form of esprit de hobbita rather than individual action by the character you choose to play. Just don't expect others always to obey your edicts — the inhabitants of Middle Earth have minds and allegiances of their own.

A quite surrealistic variation on this theme is that, having once chosen whether to assume the persona of FRODO,

INTO THE VALLEY

Lord of the Rings
GrA
Melbourne House
Price: £15.95

The *Hobbit* still probably holds the record for being the world's biggest-selling adventure ever. So reviewing *Lord of the Rings* isn't so much a question of assessing a sequel as meeting the heir to a legend.

Prising open the weighty package (it includes a paperback copy of Tolkien's 529-page novel, *The Fellowship of the Ring* — the first in the trilogy that forms the basis of this game) you feel a little like Indiana Jones peering into the Lost Ark of the

Covenant. The first nice surprise is that you're getting not one but actually three self-contained adventures for your £15.95.

The first is a beginner's game — a cut-down version of one of the full adventures that nevertheless incorporates all the main locations, objects and characters. The big plus is that eating for HELP whenever a problem is encountered produces a useful hint. Otherwise, it is much the same in looks and play characteristics as the two full-blooded, HELPless adventures that make up the trio.

It was *The Hobbit*, aided and abetted to some extent by *Twin Kingdom Valley*, that broke the mould of text adventures when it first colourfully breathed life in-

Graphics are kept simple but at least they are always quickly drawn and colourful

Possibly the world's most verbose graphic adventure TLR frequently takes up a couple of screenfuls of text

MERRY, SAM or PIPPIN at the beginning of each game, one can at any time switch to being another character with the simple command BECOME MERRY. You'd be well advised to explore the adventure in a single role before casting this faculty into use — though you could find it invaluable if, for example, you, as FRODO, feel compelled to sacrifice one of your companions in attempting a rather dangerous action! More practically, one can by this means split up the original party and have individual members of the quartet separately travelling around different parts of the Shire, for example, and testing the challenges and conditions to be found there.

As in all microadventuring, you must map your travels and, since TLR permits movements to eight points of the compass, you'll find it best to plot your progress on a grid of hexagons! It gets even more interesting when you call up the option to track a character, such as FOLLOW GREEN KNIGHT without knowing in which direction he is going. You are also bound to become involved in

combat, and here it is necessary to specify both the weapon and your victim, as in KILL WARG WITH AXE.

Wounds slow one's progress, as will weariness and lack of food. So take sustenance wherever you can find it, and don't forget to REST now and then. Other key commands always worth trying include LOOK, EXAMINE and WAIT. You can also check your SCORE at any point, PAUSE the game (which is quite different from the command WAIT), check your INVENTORY, and SAVE a particular game to tape before either attempting a risky action or powering down for the night.

When you have finally mastered your first quest, you may perhaps choose to switch tapes and encounter the Black Riders, the orcs of Mordor, the dreaded realm of Angmar and of course the evil Sauron all over again in the second, self-contained full adventure, possibly taking time to dip into *The Fellowship of The Ring* meantime to give you some more clues in your best strategy.

Overall, *The Lord of The Rings* does more than serve as a worthy sequel to *The Hobbit*, for it has a character and depth all of its own.

Attention to detail, brilliant parser logic, character interaction and the sheer potential for hours and hours of absorbing entertainment, make *The Lord of The Rings* a totally irresistible addition to the ranks of all-time macro-adventure classics.

Doomdark's Revenge
GrA
Beyond
Price: £9.95

No one has ever come close — and perhaps never will — to emulating Mike Singleton's genius with graphics manipulation in his superb strategy-cum-adventure game *The Lords of Midnight*, which was a huge hit on the Spectrum but — perhaps because of the delay in its release — failed to make anything like the same impression when the C64 version finally appeared. By then, *Beyond* weren't too fussed

Telecom's takeover of *Beyond* (and perhaps the generally dismal reception given to *Superman*) has prompted a rethink with the result that *Doomdark's Revenge* for the 64 has at last arrived — and it's looking very, very good.

If you've not played *Lords of Midnight*, it's necessary to explain that it differs from conventional adventures in that any of the available actions can be taken by just a single keypress, though the response always takes the form of text set against one of the splendid landscapes of Icemark. Indeed, one can at any location take a 360° view by tapping the keys numbered 1 to 8 in se-

Rurthom the Wise encounters a fearsome foursome in the mountains.

anyway, as they were enjoying another success with the spectrum version of the sequel, *Doomdark's Revenge* — and a Commodore implementation of that title, though frequently praised, seemed itself doomed never touzzle the 64's circuitry.

But now it seems that British

quence, and then move in any of eight directions.

In this further confrontation with the evil witchking Doomdark and the unassailable Shireth the Heartbreaker you in your role as Luxor, the Moon-Prince of Midnight have the power to directly control three

Identity crisis? The touch of a key will bring you the lowdown on whether or not your current persona is non grata

Riding out to a new megaventure — the hobbit-loving Black Riders.

Adventure Adventure Adventure Adventure

Night must fall, and the colours of dusk add an eerie beauty to Singleton's landscapes

other characters who are sympathetic to your cause. They are Morkin, Tarisheh and Rostiron and are accessed simply by pressing one of the function keys. When one of those alternatives is selected, the screen immediately changes to that character's viewpoint, wherever he may be in Icemark.

The player may look or move in any of eight directions, and choose one of several courses of action. He is also able to check progress in several ways: He may for instance ask for more detailed information about his present location, seek intelligence about any battle or skirmish in which he has been involved, confirm the position of his own army and of any others in the same location, and learn more about the character of the person under his control (and beware — this can change during the course of a game!).

In *Doomdark's Revenge*, as in its predecessor, the sophistication of the combat interludes belies Mike Singleton's interest in, and mastery of, wargaming — for although the options are much simpler than in a conventional simulation (because, after all, combat is only one of the game's many features), one's strategy can really be quite subtle. Here, combat is by no means a question of swiping at the nearest adversary and hoping that your strength holds up for a few more telling blows. Instead you are concerned with manipulating a whole army, and then deciding whether to attack or simply approach another army, not knowing whether it is comprised of allies or adversaries.

version has been held back so long. But it is here to enjoy now, and enjoy it you will — enormously. The final part of Luxor's epic quest, *Eye of the Moon*, is due out soon. One hopes that it will not be another year before a 64 implementation of that title too is made available, to complete a trilogy of strategy adventures that, in terms of their stunning visual appeal, originality and playability, have no equals.

High in the saddle in the kingdom of a million mountains, but there are seven more views to check before Luxor moves on.

There are more than just wandering armies, and special characters, depicted in Mike Singleton's unique graphic style. In the Kingdom of Icemark you will also discover strange watchtowers, fortresses, palaces, temples, torchlit ranoels and refreshing fountains — not to mention the cold mists that will spoil your view but at least entrap Shareth's legguard.

The wonder of it is that a 64

8	(6)	Robin of Sherwood — C64/128 (Adventure International, GrA, £7.95)	
NEW	9	(-)	Doomdark's Revenge — C64/128 (Beyond Software, GrA, £9.95)
NEW	10	(-)	Masquerade — C64/128 (All American Adventures, GrA, £14.95 disk only)

Level 9 deservedly hangs onto the top spot to this month's chart, which also tracks the success of other hot New Year releases.

The fabulously entertaining *Lord of The Rings* from Melbourne House, which shot to the No. 3 spot in last month's chart on the basis of prodigies alone, now shifts up another place to displace the spotty but endearing *Adrian Mole*, and another new entry from last month, *Adventure International's* variation on a theme that combines a full-feature graphic adventure with real-time combat interludes, sinks into an even higher place in the ratings.

Mastertronic's baggy basement title marks that label's first ever appearance in the Valley's chart, and Duckworth's new double tape textbased also makes its debut. The splendid 64 implementation of *Doomdark's Revenge* also appears on the landscape, and All American Adventures make a well-merited breakthrough with their marvellously illustrated, if pricey, teaser featuring a substandard Sam Spade

● ADVENTURE NEWS ● ADVENTURE NEWS ● ADVENTURE NEWS ● ADV

● **Adventure International**, who started life as a marketing function for Scott Adams titles, have reached an agreement with US Gold to market their titles in the UK. In the past year, no Scott Adams product has materialised this side of the Atlantic. However, following his acquisition of rights to Brian Howarth adventures, Mike Woodroffe has worked with Howarth to produce some outstanding home-grown titles, including *Gremias* (which outsold any Scott Adams title in the UK) and *Robin of Sherwood*. US Gold chief Geoff

Brown says he's now thinking of using AI's expertise to produce adventure spin-offs from such arcade hits as *Beachhead* and *Raid Over Moscow*.

● **Softsel** appear to have got off to a bad start as the new British distributors of Infocom product. Even review copies of new or recent titles such as *Seastalker* and *Hitchhiker's Guide to the Galaxy* were still unavailable in time for this month's column — nearly two months after Softsel's announcement that all five Infocom Classic

titles would be available from late November.

● **Firebird** haven't fixed a release date yet, but it's now certain that they'll be producing a 64 version of *Runesoft*, a role-playing adventure originally developed by the defunct Games (Tower of Despair) Workshop.

● **Bug-Byte**, newly-arrived under the software group that owns Quicksilva and Mindgames, have announced a C16 version of Trevor Hall's classic 1983 title *Twin Kingdom Valley*.

Classic Competition

The Kingdom of Icemark provides the setting for two of the most absorbing, intelligent and intricate strategy adventures ever devised — and now you have a chance to explore its secrets, its hazards and its rewards for just the cost of a postage stamp thanks to the generosity of Beyond Software, who have stumped

up 10 copies each of *Lords of Midnight* and the new *Doomdark's Revenge* as the prizes in this month's competition.

For your chance to win one of our free games, answer the simple question below and send off the cut out coupon without delay.

The first ever adventure

game was called *Colossal Caves* and ran on a mainframe computer. It was programmed by (A) John Ransley (B) Pete Austin or, (C) Crowther and Woods.

Add your name and address and the titles of your three favourite current adventures — and tick the box to indicate whether you'd like *The Lords of Midnight* or *Doomdark's Revenge* (both on tape) if you win.

The correct answer is

A B C (Please circle your choice)

My three favourite adventures currently are:

Your Name

Address

I'd like *Lords of Midnight* *Doomdark's Revenge* (tick one)

Mail this whole coupon (or a copy of it on a Postcard) to
Classics Competition, Commodore User,
Priory Court, 30-32 Farringdon Lane, London EC1R 3AU.

Activision's

You wouldn't try repairing a car if you weren't a mechanic, would you? So why try writing games when you can't program? Activision reckons it's got that solved with its new GameMaker program. We thought we'd check it out.

Activision's claims for its new GameMaker package are pretty inflated: it will let you create "incredible computer games" without having to learn complex languages or spend months programming your ideas. That's what the blurb says anyway. You've got to be cautious simply because similar packages in the past have always been such a let down.

But the man behind GameMaker is none other than Gary Kitchen who's programming track record includes the *Space Shuttle* simulator and the *Designer's Pocket* — that sounds a bit more encouraging.

The package comes either as a cassette or disk which has GameMaker on one side and a set of sprites, tunes, backgrounds and sound effects on the other. A blank tape or disk is supplied for you to put created programs on, with the option of entering a games designing competition using the GameMaker.

It has a comprehensive (if not a little daunting) instruction manual which clearly explains all the aspects of the program and gives examples to emphasize points. There is also a very useful summary sheet of all the main instructions and directions used throughout the package, as well as a chart/stave for the music editor.

The main program consists of an icon-driven programming utility and a menu system to access other parts of the package. The language is a very fast and time-saving one, with such commands as 'SPRITE DIR = ' which sets a sprite moving in a direction at a certain speed (also defined) and 'SONG IS x' which plays a named song — created on the music editor.

A well structured labelling system aids programming, too. Unfortunately, as all the inputs are icon-driven, program writing is often slowed down.

Each variable, for instance, requires you to scroll through all the letters A-Z. This can become extremely annoying when you are designing a long and complex game, as

a page of instructions may take more than ten minutes, whereas input by keyboard would take a fifth of this time. One assumes that this is because a SYNTAX-checker would have accepted too much memory.

Music and Sound

From the menu in the main program you can reach the music, sound, sprite or background (graphics) editors. The first of these, music, gives you a choice of thirteen instruments to play in three channels over three staves (a large no of notes). This has all the makings of a good package by itself — and there's a 'be' facility to help the notes flow and a tempo setting so the pace of the tune can be varied, in addition to the wide ranging sound facilities.

Scenery editor lets you design an appropriate background for your game or modify one of the pre-drawn scenes.

As mentioned, a number of pre-made tunes are also supplied, although what you could do with tunes like the Blue Danube and the Star Spangled Banner defies me.

but you can simply play around with these for a while, changing speed and instruments, to get the feel of it. A very large, complicated tune can be written and saved using the Music Editor, making this one of the best parts of the whole package.

The sound editor is an interesting design, taking the form of a large sound synthesizer with 'knobs' which can be turned to alter envelopes, pitch, etc, and a graphic equalizer for the various filters, volume and speed.

This last feature refers to the speed at which the 'frames' of sound are played back (each sound effect is composed of several sounds or 'frames' played back consecutively).

The design of each sound is pretty complex, involving nearly all the devices on screen, so you have to experiment quite a bit to get the bang of creating effective ones. This section is also professional in approach and enables some fairly advanced sounds to be created.

Scenes and Sprites

The "scenes" designer is a fairly straightforward graphics utility, but it does have

OWN

's GameMaker reviewed

impressively fast execution. A palette of four colours is used to draw with and a features list enables circles, boxes, filled circles, filled boxes and lines to be drawn.

Screen areas can be copied or erased and a zoom function enables detailed work to be tackled in close-up. No quarks, no fills, no problems with this section.

Sadly the sprite designer crashed upon loading in the review copy probably because the review disk I used was an American import. But if it matches the other parts of the design package it will be quite competent. The instructions for it include multiple sprite animation, multi-

Lots of knobs to twiddle on the sound editor screen

GameMaker features its own programming language

Simply place notes on the staff to write music.

The restrictions are perhaps best illustrated if I say that at one point I had a snapping crocodile head, two merry-go-round rabbits, Santa Claus, and two Zeppelins, an aircraft carrier, and a toy dog flying around space accompanied by For He's A Jelly Good Fellow and I felt I was pushing the package to its limits.

I feel this is an improvement on similar programs like Games Creator, but it's not quite there yet. You could definitely make some quite good original games with the GameMaker but I think you would know that they'd been made with this and not actually programmed.

colours and normal sprite design. A mass of pre-drawn sprites are supplied on disk or tape

they are animated but that doesn't make up for the lack of numbers.

Two more means firstly, the memory available for programs is only large until you add music to it. The William Tell Overture, for instance, takes up a third of your total programming size. Secondly, you can forget multi-screened games you only get two to play with.

The most I can imagine you could create with GameMaker is a souped-down *Ex-ploding Fist or Fight Night* — they use only a few sprites on screen, only a few backgrounds, and only one tune. You could make a veritable *Pacman* but not *Space Invaders* (too many sprites), while *Rambo* represents everything this package cannot do

Conclusions

So, the body of a good package is all there. Unfortunately, there are a few 'little' things that have been omitted which I feel a truly excellent games designer would have. For instance, screen scrolling in games is not catered for, nor is speech design nor absolutely stunning sound effects. These features are what separate good games from classic games.

Another aggravating point is the limit of eight sprites on the screen at once — ok, so

The Jet Set

More up to the minute news from America's most dedicated Amiga watcher. But Dan's found time to keep you up to date on the newest software for the Commodore 64.
Dan Gutman reports.

Above: Cockpit view of F-18 on carrier-landing approach. Below: Control tower view of F-18 as it divs.

The biggest news in the Commodore 64/128 world has been the recent release of SubLOGIC's *Jet* — you may or may not know that the biggest selling computer game in history (in the US) is SubLOGIC's Flight Simulator II. The program takes you on an aerial tour of the entire United States, stopping at 80 airports along the way. You can even fly your plane past the Sears Tower in Chicago, Seattle's Space Needle, or the Statue of Liberty in New York (Once I tried to fly between the two towers of The World Trade Centre and crashed).

So *Jet* is the long awaited sequel to Flight Simulator II. But this time, instead of flying a Piper 181 Cherokee Archer, you're piloting an F 16 Fighting Falcon. And you can do more than cruise around. The plane is much faster and more manoeuvrable, and it's equipped with air-to-air missiles, AGM missiles, and smart bombs.

It's a big hit over here, and if you want to get a Commodore 64/128 copy for yourself, contact SubLOGIC at 713 Edgebrook Dr., Champaign IL 61820 (include \$42)

Rumour has it, by the way, that the next flight simulator from SubLOGIC will run over phone lines — a guy in New York and a guy in Los Angeles will be able to fly around and actually see each other's planes on their screens. Wow!

Jet for the Commodore 64 — Cockpit view of F-16 approaching control tower

Now showing on Amiga

As you probably know, Amiga is capable of stereo sound. Predictably, the first stereo speakers have just been released for the machine. They're called "Room-Mate" and they sell for \$229. To get a set, contact Bose Corporation, The Mountain, Framingham MA 01701 U.S.A.

Amiga software is starting to pour into the marketplace over here. Electronic Arts has just released eight new titles: *Skyfox*, *Seven Cities of Gold*, *Archon*, *Arctofox*, *Financial Cookbook*, *Software Golden Oldies*, *Dr. J.* and *Larry Bird Go One On One*, and *Deluxe Paint*.

Most of these are translations of existing Apple and Commodore 64 programs, but *Deluxe Paint* is new and pretty spectacular. It's a graphics program similar to Apple's MacPaint, but you can use 32 colours for your

background and 32 more for your foreground. You can customize any colour by changing the amount of red, green or blue. The computer lets you magnify, zoom, smear, blend, shade and all kinds of other manipulations of the image.

Other new Amiga programs due to arrive any day: *Marble Madness* (Electronic Arts), *The Print Shop* (Broderbund), *Sargon III* (Hayden), and *Dyna Vu*, *The Halley Project* (Mindscape). The software base is still very small, but new packages are coming out every day. And on this side of the Atlantic, the catch phrase is, "Software drives hardware". No computer has ever sold very well until a decent library of software has been available for it.

Of course, there's a "Catch-22" to that — why should a software company waste its time and resources developing programs for a computer until a lot of people have bought it? Oh well, with that logic, no computer would ever be successful. Eventually a good computer will sell on its own merit.

No show at CES

Meanwhile, Commodore have been guilty of party pooping, preferring to stay away from the prestigious winter Consumer Electronics Show in Las Vegas. Instead, they held a press conference at a nearby hotel whilst, inside, Jack Tramiel's Atari avoynouced an even bigger version of its increasingly popular ST series, the one megabyte 1040ST. Funnily enough (but not for Commodore) it will cost the same as the memory poorer Amiga.

Also inside, a number of British software houses were in evidence. Two with notably large amounts of floorspace were Mastertronic and Firebird.

Well, Commodorians, that's it from the States. You'll be interested to know that the much publicized "Computer Slump" over here has subsided somewhat. People have stopped saying that computers were a fad. People have stopped saying that computers are the greatest thing since the invention of the wheel. Now they're being a little more realistic — computers can be useful tools for some people, and others don't really need them.

LASER BASIC

TURN YOUR COMPUTER INTO A PROFESSIONAL GAMES WRITING MACHINE FOR FUN AND PROFIT!

LASER BASIC adds more than 250 commands to the resident BASIC.

Includes an extended interpreter, a sprite/graphic designer and 2 sets of pre-defined sprites. Easy to use, with a full demonstration program and extensive manual.

- Over 250 new commands to make your BASIC programming easier to learn with 100 commands in 135 ready-to-use routines.
- Sprites and graphics designer built in!
- 44 THIR-D DIMENSIONAL TEXTURES FOR COLOR, 3-D and 2-D shadows and 34 picture fonts to use in your programs.
- Easy-to-use graphics and drawing tools to create your own sprites and graphics.
- Drawing and editing of screen images to be incorporated into your programs.

HAPPY HACKER

Much is happening in the wonderful world of comms — notably cheap modems and lots of on-line software. But beware, there have been recent disputes over modems which don't wear the oil-important green badge of approval from British Telecom (which, of course, forbids you to connect to the BT phone system). But lets get on with the news . . .

by Geof Wheelwright

● **Solely 64 Salutations** — Here's the latest news from Micronet Towers, where Commodore User's revamped *Happy Hacker* column was greeted personally by Solely 64 bigwig Phil Godsell. He sent this personal massive . . .

"Hello Geof, read your *Happy Hacker* column in Commodore User, and couldn't resist dropping you a line. You mention all the wonderful software on CompuNet (fine enough), but I hope you're going to mention such gems as Elite's *Commando* on the 'Net, which is number one in all commercial charts and which we had first day of release as telesoftware. By the way, look out for *Tward 64* on the 'Net."

All the Best,
Phil Godsell (Software)
Consider it mentioned, Phil .

● **Micronet Freebies** — *Commando*, however, isn't the only 64 software available on the 'Net. There's quite a selection of FREE (gratis, no funds involved) games, utilities and other goodies which can be downloaded.

But take care that any savings you might make on the software itself are not increased by a bigger bill from BT. Some programs — such as the *Rollerball Express* arcade game — can take more than 30

minutes to download and save to tape (the problem is not particularly acute for disk drive users, who are already used to putting up with the snail-like pace of the 1541 disk!)

In recognition of this problem (which Solely 64 admits isn't limited to *Rollerball*), you can now get 'long-load' software on tape from Micronet.

For £1, tape users can get up to two Solely 64 programs on cassette in turbo load format. The 'Net says the change is to cover postage and packing, cassette cost plus a small amount to cover handling. It points out that the actual call cost to download software such as *Sid's Juicebox* and *Rollerball Express* to tape is in excess of 50p plus the cost of the tape!

The 'Net promises that in future, any telesoftware on Solely 64 that will be available on turbo cassette and will be clearly indicated in the SOLELY 64 Software Index on 80013321.

● **Meanwhile At CompuNet** — CompuNet is still having a ball with it's new *Parrlyne* and Editor Jene Firbank now informs us it's now more popular than the old 'on-line chat' ever was — with new people logging on every night.

The only problem with this electronic

party is trying find quiet places to go off and have a private chat — so CompuNet is furiously working to get its 'private room' facility set-up, whereby a few people on the partyline can section themselves off and have a quiet on-line conversation.

These will be accessed via a 'ROOM' command, whereby you might invent and enter a room called 128 with a 'ROOM 128' command — and you could go into that room to chat with friends about the 128.

Editor Jane also tells us that there could be a 'LOCK' command for really private conversations, but that's still in the planning stages.

● **Getting Your Number** — CompuNet is also working on alternatives to navigation by 'page numbers'. It soon hopes to implement alphanumeric gotos which would allow you to goto MUD just by typing the word MUD after hitting the GOTO command.

Most major sections such as NEWS, PARTY and JUNGLE would thus be quickly accessible without having to remember whole loads of numbers.

● **On-Line Aid** — The computer communications industry's contribution to the Band Aid fund-raising campaign is looking for any and all contributions from individuals and companies to aid African famine relief.

Money coming into Online Aid through this appeal will be channelled through Band Aid/Live Aid to provide immediate food aid and — in the longer term — go towards relief and development projects. Anyone wishing to contribute or help this campaign can contact Claire Gooding on 01-624 7945 or Paul Walton on 01-515 2739.

That's all the hacking news that's fit to print this month — but I look forward to hearing your comments and ideas for this column. Remember, you can contact me on Prestel mailbox 01280101 or on CompuNet via the ID CBMUSER. Happy Hacking!

COMPETITION

The *Happy Hacker* is pleased (if not happy) to announce a new competition which could win you a copy of *The Hacker's Handbook* for the Commodore 64 (by Ian Scales and a certain Geof Wheelwright, published by Longman).

I can vouch for at least one of the authors and promise that the book will be a good read. For your chance to win a copy answer the questions below and send off to Commodore User, *Happy Hacker* Competition, Priory Court, 30 32 Farrington Lane, London EC1R 3AU. Entries must reach us no later than 20th March.

1. What was the recent film in which a teenage hacker almost caused a third World War?
2. Which member of the Royal Family had their Telecom Gold account hacked last year? Was it (A) Princess Diana, (B) The Duke of Edinburgh or (C) Prince Harry?
3. What is the name of the interactive adventure game currently enjoying great popularity amongst modem owners?

**** TAPE BACK-UP DEVICES FOR VIC 20 CBM 64 C128 ****

DCL1 INTERFACE

The DCL1 links two Commodore 40 that a backup can be made directly from one database to a second database without the program entering the computer. No software needed. Backs up ALL programs including Turbo etc. - Thousands sold! - ORDER AS DCL1 PRICE £10.00

DCL4 INTERFACE

You can make a back up copy on either a second database OR on a standard audio recorder with this interface without the program entering the computer. No software needed. A LED data monitor shows the start & end of programs. Backs up ALL programs including Turbo etc. - Very Popular - ORDER AS DCL4 PRICE £17.00

DCL4A INTERFACE

SIMILAR to the DCL4 but fitted with an Audible data monitor. ** NEW ** ORDER AS DCL4A PRICE £18.50

NOW WITH IMPROVED CIRCUITRY

**** NEW ** TAPE TO DISK ** NEW ** TAPE TO DISK**

By using a unique user programmable battery back up RAM cartridge, 100's of tape to disk systems will transfer most programs from tape to disk. The operating software is downloaded from disk so not only can you use the module or tape to disk but also to make a most ROM based programs simply by loading in the appropriate software from disk. You can even use it as your customised Kernel ROM Emulator etc. etc.

For only £29.95 you will receive a PC/M1 programmable ROM cartridge, tape to disk and DT Loader software. 3 Function control adaptors which will allow you to - (1) program the module, (2) emulate ROMs, (3) perform tape to disk transfer plus simple instructions on this easy to use amazing new cartridge. Order as PC/M1.

**** NEW ****

C128 RGB to video adaptor enables you to use one TV or monitor in any mode. Switch between between video & RGB outputs. Versions available for monochrome and/or TV. SAE for details from C2805.

**** FAST CBM 64 REPAIRS ****

Standard services including parts, labour, postage VAT £21.50
Express service as above but return of post service £34.50
Replacement CBM 64 power packs £29.50
1541 disk drive adaptors fully inclusive £14.00

Please state faults. The above prices cover electrical parts, replacement keyboard, cash, post and power supply extra. Please phone before sending your computer.

**** FREE CATALOGUE, Please send 17p stamp ****

** Fast mail order service all prices fully inclusive **
** Plus 10 day money back guarantee on back-up device **
Cheapest prices to call us to our shop at 209 Tong Street, Bradford. A please phone first to check availability. Please send all return orders to our shop. Payment accepted by cash, cheque, PO, money order, bankers draft, Transcash (for Transcash order pay at any Post Office our account no. is 650 3619). Express Please add £1.00 payment in sterling overseas.

GRAFPAD II— THE ULTIMATE IN GRAPHIC INPUT DEVICES FOR THE COMMODORE MICROS

The first low-cost graphic tablet to offer the performance and durability required for business, industrial, home and educational applications. It's small, accurate and reliable. Needs no adjustment or preventive maintenance. **GRAFPAD II** is a unique product that brings the power of modern technology under the control of the user.

GRAFPAD II:

- A brilliant British invention manufactured in Gt. Britain, unequelled in the world of graphics input.
- Ferranti's space age technology makes the Grafpad II unique in its digitising technique.
- The culmination of 3 years of advanced research to create a final graphical solution for the world computer market.

IT COMBINES IN ONE DEVICE ALL THE FACILITIES OF PREVIOUS ATTEMPTS AT INPUT DEVICES. THE APPLICATIONS ARE AS NUMEROUS AS THAT OTHER COMMONLY HELD DEVICE—A PEN—AND INCLUDE:

- Option Selection ● Form Input ● Data Collection ● Logic Design ● Circuit Design ● Picture creation ● Picture storage ● Picture retrieval ● Construction design ● C.A.D ● Text Illustration ● Games ● Pattern Design ● Education ● PCB Design

GLUED TO THE BOX

A roundup of monitors for the 128

by Ken McMahon

Now that you've moved up to a 128 you won't be content just to plug it into the old telly. With its 80-column display and hi-res output, you can use it with a confusingly wide range of monitors. We explain and list all the options.

If you've splashed out enough hard earned to buy a 128, you'll probably want to get the most out of it. And the first thing you'll notice is that you won't get very much if you plug it into the telly at home.

The reason is simple: you won't be able to get 80-columns on a high resolution screen, and you won't be able to run the programs specially designed for the 128 (I'll explain why later). So the telly just won't do let the family watch *Eurodetents* on it. You've simply got to buy a monitor.

Buying anything for your computer is fraught with problems, there's always a simple and a hard way. The simplest way is to buy the excellent *Commodore 1901* colour monitor specially designed for the 128.

It will work in 40-columns (64 mode) and by simply flicking a switch, you get the full 80 column RGBI output that the 128 can produce. At £299.99 it will also produce a hole in your pocket. If you've got that kind of money, you can stop here, the rest of you can carry on reading.

There's a wide variety of cheaper monitors you can buy, and the best way of choosing is to decide what you want to do

Commodore's 1901 colour monitor covers all the options — at a price

90 COMMODORE USER

Before we look at what particular monitors have to offer it's probably a good idea to examine the kind of output the C128 can produce and how it does it.

128 video sockets

● **RF connector:** found at the back of the 128, like the other video ports. This sends the picture to your TV in the same way it

Trilogic's Vidcon 2 lets you display 80 columns on the Commodore 1701 monitor but costs a whopping £50

with your 128. The hardened gamerster needs a good quality colour screen whilst a business user might settle for a monochrome version.

receives a television broadcast. Since the TV is a low resolution, the picture produced is pretty poor quality. That's why the 128 will only display a 40 column picture on a TV set.

● **composite video connector:** This DIN-type socket outputs the red, green and blue picture components in a combined signal to a suitable monitor. It also sends the Audio signals to the monitor's speaker.

One aspect of this socket which makes it different is that it will also carry separate chroma and luminance outputs capable of being received by Commodore monitors. This produces a slightly better quality picture than a standard composite video monitor, but it's still not good enough to produce an 80 column picture.

● **RGBI connector:** This is immediately to the right of the RF socket. It outputs the sound as well as the red, green and blue picture elements on separate pins, thus ensuring the highest picture quality possible. The 128 can only be used in 80 column mode when connected to an RGBI monitor via this port. The 'I' incidentally, stands for intensity and makes possible the use of 16 colours in 80 column mode instead of the usual 8.

Thomson CM31481V1 — one of the best alternatives to the 1901

Resolution

Apart from the way in which the signals are transmitted and received, the other factor which determines picture quality is the resolution of a monitor. Manufacturers are prone to publishing reams of statistics which are more likely to confuse the prospective buyer than give a clear indication of a monitor's resolution. It's not unusual to see medium or even standard resolution models described as high resolution.

The clearest indicator of a monitor's resolution is the **dot pitch**. This is the distance, in millimetres between two adjacent phosphor dots on the screen. Generally speaking, monitors with a dot pitch of around .65mm are described as standard resolution, about .42mm as medium, and anything below .31mm would be high resolution.

To confuse the issue not all manufacturers indicate the dot pitch of their monitors, but instead quote the **bandwidth** in MHz. Although it's not as accurate an indicator of resolution, generally speaking, the higher the bandwidth, the higher the resolution.

Monitor options

Now that you know all the jargon connected with video, it's time to look at the real buying choices. They split into five groups.

(1) **TV/Monitor:** This is a combined TV and colour monitor, which is considerably cheaper than a dedicated monitor. On the minus side, the resolution and therefore picture quality will be at the bottom end of the scale. Also, the models shown here only have RGB (no I) inputs, which means only eight colours in 50 column mode.

ADAPTORS

MODEL	FEATURES	PRICE	COMPANY
Vidcon 1	RGB to PAL converter Provides 80 column 16 colour output to TV or composite video monitor	£59.95	Trilogic 0274 684 289
Vidcon 2	As 1 but without TV option Suitable for use with the Commodore 1701 monitor	£49.95	Trilogic
Vidcon 3	Monochrome version of Vidcon 1	£29.95	Trilogic
Vision-switch	Provides 80 column monochrome picture on a composite video monitor	£9.95	Sabre 0332 556361
Magik Monitor	Provides 80 column monochrome display on monitors giving only 40 columns	£14.95	Robtek 01-290 0118

VisionSwitch costs only a tanner but it won't let you display colours

(2) **Monochrome Monitors:** Perfect for business use, word processing, etc and certainly the cheapest way of getting to own a monitor — but no colour.

(3) **Composite Video Monitors:** There are two reasons why you might be using a composite video monitor with a 128. The most likely is that you have upgraded from a 64 and couldn't afford a new RGB monitor. Alternatively it may be that you have no need of an 80 column screen, but wanted a better than TV quality picture.

(4) **RGB Monitors:** This is the bee's knees. An RGB monitor will enable you to get the best from your 128 in 80 column, 16 colour mode. Most RGB monitors also incorporate a composite video input. This is essential, as without it the 128 cannot be used in 40 column or hires graphics mode. By the way (for reasons we've no space to go into), you won't be able to connect a monitor with an RGB TTL input, like a lot of the Macrovite models.

(5) **Adaptors:** There are various adaptors now on the market which will allow you to use the 128 in 80 column mode on either a TV or a composite video monitor. The cheapest of these will only produce a monochrome screen, but at the top of the range Trilogic's *Vidcon 1* will produce a sixteen colour 80 column screen for £60.

Obviously the picture quality is not up to the standard of 'real' RGB. Apart from less sharp definition of characters the most noticeable shortcoming is the degradation of colours, which appear slightly muddy. However, at the price it's certainly worth considering for those who already own a 1701 monitor.

Once you've made your choice as to the type of monitor which best suits your needs, it's simply a question of choosing between what's available. As well as considering factors such as screen resolution it's worth looking at the additional features manufacturers include.

Most RGB monitors have a monochrome switch which gives a green or amber screen, the Thomson range includes both.

Some offer swivel/tilt bases and anti-glare screens as standard and the dimensions may be important if you have limited desk space. Bear in mind that you will probably have to pay extra for connecting leads which most good dealers should have in stock.

THE FINAL CARTRIDGE

THE FIRST OUTSIDE OPERATING SYSTEM FOR THE CBM 64 *

UTILITY OF THE YEAR 1985

€45

This new operating system built in a cartridge does not use any memory and is always there. Compatible with 98% of all programs.

DISK TURBO - 6 times faster loading - 8 times faster saving

TAPE TURBO - 10 times faster, even with files - normal Commodore commands - compatible with standard turbo's

ADVANCED CENTRONICS INTERFACE - compatible with all the well-known electronics printers and Commodore printer programs. Prints all the Commodore graphics and control codes (important for listings)

SCREEN DUMP FACILITIES - of low res Hi-res and multicolour screens! Prints full page with 12 shades of grey for multicolour pictures even from games and programs like Doodle, Koella pad Printshop etc. Searches automatically for the memory address of the Picture. Special version available for the CBM 801 and 803 printers

24K EXTRA RAM FOR BASIC PROGRAMS AVAILABLE: Two new commands Memory read, Memory write. They move 192 bytes with machine language speed anywhere in the 64K Ram of the CBM 64. Can be used with strings and variables

BASIC 4 0 COMMANDS - like Dload, Dsave, Dappend, Catalog, etc

BASIC TOOLKIT - with Auto Return (incl. Goto and Gosub), Find, Help, Old, etc

Original multicolour full page screen dump print out

PREPROGRAMMED FUNCTION KEYS: - Run, Load Save, Catalog Disk commands, List (removes all list-protections)

KEYBOARD EXTRA'S - Allows you to delete part of a line, stop and continues listings, move cursor to lower left hand corner. Pokes and Syscalls in Hex. Typ command operates your printer as a typewriter

COMFORTABLE EXTENEO ML MONITOR - with relocated load scrolling up and down. Bankswitching etc. does not reside in memory

RESET SWITCH: - resets to monitor, resets with aid - resets to Hi res printing resets away protected program

ON/OFF SWITCH - we hope you never need that one

FREEZE FRAME
Stops and continues almost every program and allows you to make a total back up to disk or tape automatically

14 Days money back guarantee if you are dissatisfied

12 Months repli cement guarantee

* works with C128 in the 64 mode

MICRO-CLERK

Micro-Clerk is a pretty unique piece of software. It offers not only a cash accounts program but wordprocessing, filing, spreadsheet and "letter" functions — and they all integrate. It makes full use of the 128's memory and Basic (it's actually written in an "enhanced" Basic invented by its author) and capitalises on the latest trends for colour, pop-up menus and the like.

You can use it with both the 1570 and 1571 disk drives, but not with the 1541 as you have to make a back-up program before the program will run — and the 1541 won't let you.

Micro-Clerk comes on two disks, one for the main program and the other for the accounts programs. You also have to fit a security "dongle". The user is then taken to an opening "noticeboard", a neat idea, on which is displayed any message that was typed in at close-down the last time the computer was used.

The date the machine was last used is displayed, and the user is given the opportunity of up-dating this or continuing. If this is the first time, you're instructed to back-up the supplied program disk.

When you're done all that, you're confronted with the main menu and its seven options: *Accounts, Typing, Filing, Spreadsheet, General, Back-up and Finish*.

You can move between the options by using the cursor keys or spacebar or by typing the initial letter. Return must be pressed to each case. Where there are two options with the same initial letter (eg FILING and FINISH), a second typing moves to the second, if required. This procedure is followed with all menus. The user returns to previous menus by pressing ESC.

The cash book

Though the Typing and Filing options are quite adequate, it is the accounts section which will attract many users. This is basically a cash book. Sales ledgers and invoicing is not supported, though a module is under development that will remedy this.

The cashbook is on a separate disk, but on a 1571 double-sided disk it might be possible to copy the cash files to the reverse of the main (backed-up) disk, making disk swapping unnecessary. All data

Last month we rounded up all the business and serious software available so far on the new 128. Now it's time for some in-depth reviewing of two particularly impressive packages: Micro-Clerk and Vizawrite Classic.

Two's Company

files are held on the program disks and these are three levels of password protection.

After entry to the accounts section, the user has the choice of selecting weekly or monthly accounts, starting date, type of VAT scheme (standard, or one of the special retailer schemes), and clearing old entries. Some tutorial entries are included, which are handy at first for seeing how the system works, but they would have to be cleared before it could be used seriously.

Analysis headings from 100 to 999 can be set up, and some specimen headings have already been supplied: sales, stationery, VAT adjustment, cost of sales, wages, fixed assets, bank loan, and so on. These are sub-divided into nine groups — sales, purchases, other income, expenses and overheads, capital employed, long term liabilities, fixed assets, current assets, and current liabilities.

The name of the groups can be changed, but not their meaning, since they are used to calculate gross and net profit, turnover and so on.

This constitutes a really powerful normal ledger, which should satisfy the most scrupulous accountant or Customs and Excise Inspector, printing an automatic audit trail at the end of each

Micro Clerk keeps tabs on your bank balance.

week or month, as required.

The wordprocessor

Despite its modest description, the "typing" option is a full-function word processor including mail merge and block move. With the "letter" facility, it's possible to cut and paste information from any other area of the program.

For example, to include accounts details such as balance sheet or the results of any heading, the user must press F7 while

Micro-Clerk offers weekly reports on cash receipts.

DATE	DESCRIPTION	AMOUNT	CASH	BANK	DEBIT	CREDIT	TOTAL
1984-01-01	Balance	100.00		100.00			100.00
1984-01-05	SALES	50.00			50.00		150.00
1984-01-10	PAYROLL	20.00	20.00				130.00
1984-01-15	RENT	10.00		10.00			120.00
1984-01-20	SALES	30.00			30.00		90.00
1984-01-25	RENT	10.00	10.00				80.00
1984-01-31	TOTAL	120.00	30.00	30.00	80.00		50.00

within accounts. Then after moving to "Typing" F8 must be pressed to paste the info onto the jotted. This process is also passward-controlled.

The jotted can also be used to access a full diary/calendar function, disk and printer functions, calculator and electric typewriter (printing one line each time Return is pressed).

The spreadsheet

The spreadsheet is a fairly modest affair, with a sheet of 26 columns, 9 characters wide (unchangeable), and 52 rows. Formulae may be up to 70 characters long. When SAVED to disk, a sequential file with the suffix ".SP" is produced, though only the cells on which entries have been made are SAVED. The part of the spreadsheet on screen at any time can be copied to the jotted by pressing F7. This permits sections of the spreadsheet to be incorporated into "Typing" WP files.

by Karl Dallas

any

Micro-Clerk and Vizawrite Classic reviewed

Conclusion

This is a very impressive package. Space available does not permit more than a superficial description but any cash trader would find it worthwhile investing in a C128 for this one piece of software alone.

- Micro-Clerk
- Commodore Business Machines 0536 205555
- Price: \$99.95 inc VAT
- Format: disk (plus dongle)

VIZAWRITE CLASSIC

Vizawrite Classic is a sophisticated upgrade to the already popular Vizawrite wordprocessor on the Commodore 64. Since then, it's also appeared for the IBM PC and its clones. If you've upgraded from the 64 version of Vizawrite, yes, it is possible to read files on the new program, but more about that later.

Vizawrite comes on one disk with spelling checker on the reverse, and a cartridge

that contains part of the program code which wouldn't fit into the memory.

Loading up

When you've loaded up (three minutes on the 1541 but a claimed 30 seconds on the 1571) you no longer need the program disk except for the spelling checker or the sample document which illustrates the program's more useful functions.

The main improvement over Vizawrite 64 is the 80 column screen, which displays text as it will be printed out. There's also a set of pull-down menus accessed by simple key strokes.

Text memory is larger, too, 712 lines of 80 characters length, amounting to about

Mail Merge is one of Vizawrite's more professional features

11000 words. This total is 'dynamic', meaning that more text space is available if you make use of one of Vizawrite's clever facilities, glossary phrases.

Extra facilities

Glossary phrases (sometimes called keyboard macros) are strings of text you can define, save and call up using ALT and a letter of the alphabet. So you could save yourself typing a much-used letter into by assigning it to a glossary.

The spelling checker is co-resident in memory and can be used mainly without swapping disks. The dictionary carries 30,000 words which can be added to. It also includes plurals and some unlikely words like 'sardvark'. But it won't allow you to 'paste' the correct spelling into the text. Wild cards can also be used. For example: "a???" prints out all four-letter words beginning with "a".

Mailmerge is fully supported both from memory or a file on disk which can be from any program producing ASCII sequential files. There's a set of 'help' screens which the user can edit to include any additional information. There's a pull-down calculator that allows figures to be

'pasted' into the text, and Centronics interface software.

Finally, there's a choice of three printer fonts, one of which purports to give near letter quality print. In practice, the letters are far too large for correspondence work.

Now to 64 compatibility. It is possible to read and edit files created on the 64 version of Vizawrite, but they must be renamed if they're to be saved under the new format.

Conclusion

This is a powerful, fairly friendly program which incorporates a lot of sophisticated functions. That means it's manual must be concise and lucid.

Sadly, Vizawrite's manual leaves something to be desired. If the documentation were up to the facilities this would probably be the best wordprocessor for the 128 so far.

- Vizawrite Classic
- Viza Software 0634 813780
- Price: \$99.95 (inc VAT)
- Format: disk plus memory cartridge

On screen formatting and pop up menus add to the user-friendliness.

Tommy's tips

1571 upgrade

Q My inquiry concerns the new 1571 disk drive. I own a Commodore 64 and the 1541 disk drive, as well as quite a good software collection — mostly disk-based.

My problem is that, will I be able to run my single-sided disks that ran on the 1541, on the 1571: as this is a double-sided disk drive or will I have to convert all my single-sided disks on to double-sided disks. I would be grateful for any pearls of wisdom, advice and information that you can supply me with, thank-you.
P. Scerri, Hants.

A The only difference between the single and double sided disks are that the latter get read on both sides, giving twice the capacity: there is no other difference (in 64 mode) between disks run on a 1541 and a 1571. Provided that Commodore actually decide to market the 1571 it will read all existing 1541 disks without needing to make any changes. So far, we've only seen it inside the new 1280 machine.

Sprite control

Q I have been writing a game for the Commodore 64 and have come across a couple of problems.

I'm controlling sprites by using the keys but I have to keep on tapping the key to make the sprite move. Is there any way a sprite will move with the key held down and stop when the key is lifted?

Also, can you give me the joystick commands — I can't find them in the manual.

Martyn Gay, Hants.

A In order to keep the sprite moving while a key is depressed you must make the keys auto-repeat. This is done by **POKE 650, 128** which makes all the keys repeat. To restore the repeats to only the cursor and space keys, type **POKE 650, 0**.

As for the joysticks, there are no actual 'commands' for reading them; you have to read the joystick registers and then carry out the appropriate action depending on the values. The registers are held at 56321 (part 1) and 56320 (part 2). The five controls on the joystick are shown by the following 'bits' in the register:

Function:	N.	S.	W.	E.	Fire
Bit No:	0	1	2	3	4

If the joystick is moved in a particular direction, or the fire button is pressed, then the relevant 'bit' changes from 1 to 0. If you want to play around with writing your own joystick routines and are not familiar with using **AND** and **OR** operators to read individual bits then either Commodore's *Programmers Reference Manual* or one of the other reference books for the 64 would be a worthwhile purchase.

Lose the keys

Q I would appreciate it very much if you could help I have written a Noughts and Crosses program for my project at College, but there is just one problem I don't know how to solve. You are my last hope as I have consulted my Tutors at College and they cannot help.

The game is for two players, when the screen has been set up the computer then runs through a series of checks to see what keys are pressed, for this I used: **IF PEEK (197) = X: X** is the keycode for the key I want pressed.

When the game is over the users are prompted with the question "Do you

want another game (Y/N)". After this is printed the computer then prints, without any reason, the keys that were pressed by the users during the game. It is the printing of these keys I can't manage to erase from the program.

I've tried setting the store (197) equal to 0 but the result doesn't change. I would be very grateful if you could help me.
G. Smith, Essex.

A What is happening is that you are reading the 'key press' register, not the keyboard buffer. The result is that the buffer fills up the characters as the keys are pressed until the first time you use an **INPUT** or **GET** command, then the entire contents of the buffer are printed out.

The solution is to clear the keyboard buffer before asking the "another game?" question. This can be done by simply setting the 'no of characters in the buffer' register to zero by **POKE 198, 0** in the line immediately before the **INPUT** prompt.

Printer problem

Q I've just bought the MPS 801 printer but I can't seem to get it working except on test. I've tried taking print-outs of programs on screen but it won't work.

Could you please help me and tell me whether there's a tape, disk or cartridge for the 64 that will get the printer working.
A. Pritchard, Staffs.

A You should have got a handbook with the printer, which would give you all the information you need. However, there are three things you can carry out to test the printer which will also indicate how you can use it in your own pro-

BANK MANAGER is the complete home accounting package for your computer. This superb program has evolved from 10 years of accountancy training to give you friendly, 20 year bank transactions may be entered including banking orders, direct debits etc. Everything possible in home accountancy. **BANK MANAGER** will let you take your mortgage, HP and investments, it also includes the exciting, growing market of self-declared CPAs (Contractors) and much more. It may be saved on 100K or even growing hard-disk drives. **CPA CONTRACTORS** and much more. It may be saved on 100K or even growing hard-disk drives. **CPA CONTRACTORS** and much more. It may be saved on 100K or even growing hard-disk drives. **CPA CONTRACTORS** and much more. It may be saved on 100K or even growing hard-disk drives.

HOT SHOTS

By Mike Pattenden

Hello and welcome once again to Hotshots. So nice to have you along. Come closer, I've got something I want to tell you, buy me a drink and the information's yours.

Cheers! Well between you and me a grubby little hotshotopia in a dirty mat informs me of a 'wacky' party game for adults.

Saucily entitled 'Posthorn' the game from, er, sizzling **Satyr Software** (that's quite enough Five! St 6th from you — Page 3 Ed) promises party fun for adults with little or no interest in computers. Satyr have thoughtfully included a turbo loader on the game to get you up and running (so to speak) as quickly as possible.

Scoby Dooby Do where are you update. The on/off computer cartoon

"Right, you're nicked on suspicion of promoting a criminally stupid piece of software for Argus." Argus software staff cause a disturbance whilst impersonating police officers impersonating a successful software house, whilst impersonating a funny photo

game is definitely on once again. Elite have now put it out for a "well known" development house to finish. The game looks set for release in May. Will it be worth a **Scoby Dooby Do**?

Word reaches me that there is now an analogue joystick out that is specifically available for Firebird's

Games Plus Games Plus Games

Rexis racing game. If it works properly I confidently expect it to transform Rexis into the classiest racing simulation for the 64. More information from Meadmore Distribution on 051 521 2202 and can they please send me one.

It's time for a car update. Just to show you the industry's making as much money as ever out of you all, the sports cars keep rolling out.

Thirty Steve Wilcox big boss of Elite just invested profits from Commodore in a secondhand gold Turbo Esprit. Meanwhile over at Melbourne House those Fiat sales have led to another Porsche and a BMW rolling in

Allo, allo, allo it's sily madout time again. So far this week I've received a helmet and a truncheon through the post. Putting two and two together I cleverly deduced that a police game was on the way.

And I was right. It's called **The Force** and it's a strategy game from Argus that's being produced with police cooperation. You might say that they're helping Argus with their enquiries.

Anyway you play the part of a super-intendant facing difficult situations that you must handle with tact and discretion. Sounds like they could use a copy at Hendon.

What we're on the subject of sily malcasts, English Software unable to produce **Elektra Glide** on time, plumped instead for a key ring with a steel block on the end of the chain. I dutifully put my house keys on it. There's now a hole in my pocket —

"Right, you're nicked on suspicion of promoting a criminally stupid piece of software for Argus." Argus software staff cause a disturbance whilst impersonating police officers impersonating a successful software house, whilst impersonating a funny photo

hope the game doesn't have the same effect when they price it.

You may remember me mentioning Denmark's poor taste and the adverse reactions they received when **Friday 13th** appeared last December. Well we received a very humble note saying they'd withdrawn the adverts in a grand gesture to public decency.

Truth of the matter is they got slap-

More poisonous mail filters through the system to Priory Court. There's a terrible campaign of hate being waged against Activision's Computer People down in Slough. Who is responsible for these acts of violence against the pet people? An office cynic suggested Activision themselves. All good publicity eh?

Has Andrew Wright been busy with the First Book or are there more sinister faces behind this gisty business? I demand to know the truth. Who is the PRLO? Make yourself known.

As for the little berk you're holding our budget won't extend to all that used bog paper. Will the entire set of Zap back issues do instead?

ped by the Advertising Standards Authority after complaints against the artwork were upheld. A funny coincidence is that's my birthday so get those presses off now. I don't mind it they're a bit late.

Equally offensive though is US Gold's vile sexist advert for a dull looking game entitled **Legend of the Amazon Women**. It depicts scantily clad creatures with deformed limbs and big bums and that's quite enough of that — Ed. Perhaps the artist's hand was shaking too much when he drew it.

Commodore Crash Shock! There was so much excitement at the pros-

pect of seeing a real (gasp) Amiga at the Which Computer Show recently that the floor of the Commodore stand collapsed completely sending thousands of pounds of redundant (whoops) hardware crashing to the ground. Is this an omen for the future I wonder? The way I see it if Commodore go on cocking things up there won't be a company by the end of the year.

Meanwhile, Commodore bigwigs sweat it out as they contemplate repaying the loans they received.

And that's it for this month. So long sleaze keepers, love those ears to the ground
